America we must face one uncomfortable but undeniable fact Almost 50 years after the birth of the civil rights movement inequality still reigns supreme in our classrooms At a time when African American students trail their white peers on academic tests and experience high dropout rates low college completion rates and a tendency to shy away from majors in hard sciences and mathematics the Black White achievement gap in our schools has become the major barrier to racial equality and social justice in America In fact it is arguably the greatest civil rights issue of our time The Black White Achievement Gap is a call to action for this country to face up to and confront this crisis head on Renowned former Secretary of Education Rod Paige believes we can close this gap In this thought provoking book he and Elaine Witty trace the history of the achievement gap discuss its relevance to racial equality and social justice examine popular explanations and offer suggestions for the type of committed leadership and community involvement needed to close it African American leaders need to rally around this important cause if we are to make real progress since students academic performance is a function not only of school quality but of home and community factors as well The Black White Achievement Gap is an unflinching and long overdue look at the very real problem of racial disparity in our schools and what we must do to solve it      Psychology and Mathematics Education Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern

Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved

or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

**Math Power** Patricia Clark Kenschaft, 2014-01-05 Critically acclaimed and commercially successful this resource is packed with useful information and instruction Features proven teaching techniques games and more Suitable for parents of children from preschool to age 10 2006 edition

The Robot Factory Joseph Ganem, 2018-08-27 This book exposes a disturbing misuse of the scientific method to advance policies and agendas that are in fact detrimental to both science and education The author a physics professor examines two related trends in education the practice of data driven reform and the disparaging of the traditional liberal arts in favor of programs with a heavy emphasis on science and technology Many of the reforms being foisted on educators have more in common with pseudo science than real science The

reduction of education to a commodity and the shilling of science as a means to enhance corporate profits lead to an impoverished and stunted understanding of science in particular and of education in general How is it possible for schools with all students learning at grade level to be rated as failing teachers to be rated as ineffective after all their students meet their learning outcomes rising grade school math standards to result in more college students needing remedial math politicians to disparage scientists and their results but argue that more students should study science These bizarre outcomes have happened and are the result of an education system that misuses and misrepresents math and science in the classroom and in crafting education policies This book exposes the flawed and fallacious thinking that is damaging education at all levels throughout the United States and makes a compelling case for rethinking the standardized optimized and quantified approaches in vogue in education today to accommodate the different needs of individual teachers and students
