

8th Grade – Summer Math Packet

Domain: EXPRESSIONS & EQUATIONS

CCRS Standards:

7 – Apply properties of operations as strategies to add, subtract, factor, and expand linear expressions with rational coefficients.

Objective: Use the distributive property to generate equivalent expressions.

The **distributive property** of multiplication over addition states: $a(b + c) = a \cdot b + a \cdot c$ or $a(b + c) = ab + ac$.

The same is true for subtraction: $a(b - c) = a \cdot b - a \cdot c$ or $a(b - c) = ab - ac$.

Examples:

$$1. \quad -3(-2x + 5) = (-3) \cdot -2x + (-3) \cdot 5 \quad \text{Distribute 3 through the parentheses; Multiply } -3 \text{ by } -2x \text{ \& multiply } -3 \text{ by } 5. \\ = 6x - 15 \quad \text{Simplify}$$

$$2. \quad 4(5a - 9b) = 4 \cdot 5a - 4 \cdot 9b \quad \text{Distribute 4 through the parentheses; Multiply 4 by } 5a \text{ and multiply 4 by } 9b. \\ = 20a - 36b$$

1. Use the distributive property to write an equivalent expression.

$$-2(n + 7)$$

2. Use the distributive property to write an equivalent expression.

$$-8(3p - 1)$$

3. Use the distributive property to write an equivalent expression.

$$7(-4m + 5)$$

4. Use the distributive property to write an equivalent expression.

$$11(-x - 5)$$

5. Use the distributive property to write an equivalent expression.

$$-(-3k - 4)$$

6. Use the distributive property to write an equivalent expression.

$$-6(5z + 12)$$

2024 For 2024 Exam How Math Works G. Arnell Williams, 2013-04-04 We hear all the time how American children are falling behind their global peers in various basic subjects but particularly in math Is it our fear of math that constrains us Or our inability to understand math s place in relation to our everyday lives How can we help our children better understand the basics of arithmetic if we re not really sure we understand them ourselves Here G Arnell Williams helps parents and teachers explore the world of math that their elementary school children are learning Taking readers on a tour of the history of arithmetic and its growth into the subject we know it to be today Williams explores the beauty and relevance of mathematics by focusing on the great conceptual depth and genius already inherent in the elementary mathematics familiar to us all and by connecting it to other well known areas such as language and the conceptual aspects of everyday life The result is a book that will help you to better explain mathematics to your children For those already well versed in these areas the book offers a tour of the great conceptual and historical facts and assumptions that most simply take for granted If you are someone who has always struggled with mathematics either because you couldn t do it or because you never really understood why the rules are the way they are if you were irritated with the way it was taught to you with the emphasis being only on learning the rules and recipes by rote as opposed to obtaining a good conceptual understanding then *How Math Works* is for you

The Routledge Handbook on the Influence of Built Environments on Diverse Childhoods Kate Bishop, Katina Dimoulas, 2024-07-01 Children and young people are often discussed as if they are homogenous groups The reality is of course very different with an enormous variation within each of these groups and in any domain of experience pertaining to childhood or adolescence Driven by personal sociocultural geographic or economic circumstances many children and young people worldwide are experiencing a totally different reality to those who fit with more mainstream patterns of childhood This has substantial implications for their sociophysical environmental experience and our understanding of their physical environmental needs The aim of this book is to draw attention to these alternate realities for a number of these groups of children and young people highlighting the unique and different considerations associated with their particular circumstances in each instance and identifying the repercussions for their physical environmental needs Ultimately this book creates an evidence based discussion which can be used by designers planners and policy makers and those delivering services and programs to children and young people as a basis to make informed decisions on how to work with the groups of children and young people in our book for better environmental provision

Negotiating Opportunities Jessica McCrory Calarco, 2018 In *Negotiating Opportunities* Jessica McCrory Calarco argues that the middle class has a negotiated advantage in school Drawing on five years of ethnographic fieldwork Calarco traces that negotiated advantage from its origins at home to its consequences at school Through their parents coaching working class students learn to follow rules and work through problems independently Middle class students learn to challenge rules and request assistance accommodations and attention in excess of what is fair or required Teachers typically grant those requests creating advantages for middle class students Calarco concludes with recommendations advocating against deficit oriented programs that teach middle class behaviors to working class students Those programs ignore the value of working class students resourcefulness respect and responsibility and they do little to prevent middle class families from finding new opportunities to negotiate advantages in school
