The SimCalc Vision and Contributions Stephen J. Hegedus, Jeremy Roschelle, 2012-12-16 This volume provides essential guidance for transforming

mathematics learning in schools through the use of innovative technology pedagogy and curriculum. It presents clear rigorous evidence of the impact technology can have in improving students' learning of important yet complex mathematical concepts and goes beyond a focus on technology alone to clearly explain how teacher professional development, pedagogy, curriculum, and student participation and identity each play an essential role in transforming mathematics classrooms with technology. Further evidence of effectiveness is complemented by insightful case studies of how key factors lead to enhancing learning, including the contributions of design research, classroom discourse, and meaningful assessment. The volume organizes over 15 years of sustained research by multiple investigators in different states and countries who together developed an approach called SimCalc that radically transforms how Algebra and Calculus are taught. The SimCalc program engages students around simulated motions such as races on a soccer field and builds understanding using visual representations such as graphs and familiar representations such as stories to help students to develop meaning for more abstract mathematical symbols. Further, the SimCalc program leverages classroom wireless networks to increase participation by all students in doing, talking about, and reflecting on mathematics. Unlike many technology programs, SimCalc research shows the benefits of balanced attention to curriculum, pedagogy, teacher professional development, assessment, and technology and has proven effectiveness results at the scale of hundreds of schools and classrooms. Combining the findings of multiple investigators in one accessible volume reveals the depth and breadth of the research program and engages readers interested in:

- Engaging students in deeply learning the important concepts in mathematics
- Designing innovative curriculum software and professional development
- Effective uses of technology to improve mathematics education
- Creating integrated systems of teaching that transform mathematics classrooms
- Scaling up new pedagogies to hundreds of schools and classrooms
- Conducting research that really matters for the future of mathematics learning

Mathematics Education and Technology-Rethinking the Terrain

Celia Hoyles, Jean-Baptiste Lagrange, 2009-10-09

Mathematics Education and Technology: Rethinking the Terrain revisits the important 1985 ICMI Study on the influence of computers and informatics on mathematics and its teaching. The focus of this book, resulting from the seventeenth Study led by ICMI, is the use of digital technologies in mathematics teaching and learning in countries across the world. Specifically, it focuses on cultural diversity and how this diversity impinges on the use of digital technologies in mathematics teaching and learning. Within this focus, themes such as mathematics and mathematical practices, learning and assessing mathematics with and through digital technologies, teachers and teaching, design of learning environments, and curricula, implementation of curricula, and classroom practice, access, equity, and socio-cultural issues, and

connectivity and virtual networks for learning serve to organize the study and bring it coherence Providing a state of the art view of the domain with regards to research innovating practices and technological development Mathematics Education and Technology Rethinking the Terrain is of interest to researchers and all those interested in the role that digital technology plays in mathematics education **Literacy Assessment and Intervention for Classroom Teachers** Beverly

Metacognitive Knowledge Joke van Velzen,2017-08-01 An important goal in contemporary educational psychology research is adolescent students development of higher order thinking which includes among other things that these students become competent and independent learners and problem solvers This goal comes forth from the notion of education for life that emphasizes that students can direct their learning and problem solving of their own accord Especially high school students can encounter difficulties in independent learning and problem solving when they make the transition to higher education To counter this these students need to possess among other things metacognitive knowledge which they may have insufficiently This book offers new insights about late adolescent students understanding of their metacognitive knowledge regarding learning and problem solving It offers a description of a research project conducted to obtain a better understanding of the students abilities and views with respect to what their metacognitive knowledge encompasses and how they attempt to develop apply and improve this knowledge regarding learning and the solving of mathematical and first language problems in a more effective way of their own accord Specifically the results of the studies of the research project enable us to understand metacognitive knowledge better in that it provides explanations about the students development of this knowledge across domains This book offers further details in terms of providing evidence for theory building regarding metacognitive knowledge

The African Mother Tongue and Mathematical Ideas Abdul Karim Bangura,2020-06-02 This book by renowned scholar Dr Abdul Karim Bangura combines linguistics and mathematics to show how and why African centred mathematical ideas can be a driving force in Africa s development efforts Bangura explores the concept that Africa has been the centre of the History of Mathematics for thousands of years as the civilizations that emerged across the continent developed contributions which would enrich both ancient and modern understanding of nature through mathematics However scholars and other professionals working in the field of mathematics education in Africa have identified a plethora of issues in carrying out their tasks This is highlighted by one of the most compelling arguments in the book which is that a major reason for these problems is the fact that the African mother tongues has been greatly neglected in the teaching of mathematics in the continent Bangura asserts that a change has to be made in

order for Africa to benefit from the exceptional opportunities mathematics offer showing that even if there is a great body of work connecting linguistics and mathematics few analyses have been performed on the link between African languages and mathematics and the ones that have been made are not theoretically grounded on linguistics Thus the book begins by identifying the objects of study of linguistics and mathematics and delineates which ones they have in common Next since the object of study of linguistics is language the nine design features of language are employed to examine each of the objects as it pertains to African languages After that mathematical ideas of sustainability and those of tipping points are suggested as means to help Africa's development efforts

How Students Think When Doing Algebra Steve Rhine,Rachel Harrington,Colin Starr,2018-11-01 Algebra is the gateway to college and careers yet it functions as the eye of the needle because of low pass rates for the middle school high school course and students struggles to understand We have forty years of research that discusses the ways students think and their cognitive challenges as they engage with algebra This book is a response to the National Council of Teachers of Mathematics NCTM call to better link research and practice by capturing what we have learned about students algebraic thinking in a way that is usable by teachers as they prepare lessons or reflect on their experiences in the classroom Through a Fund for the Improvement of Post Secondary Education FIPSE grant 17 teachers and mathematics educators read through the past 40 years of research on students algebraic thinking to capture what might be useful information for teachers to know over 1000 articles altogether The resulting five domains addressed in the book Variables Peterson Leatham 2009 The purpose of this book is to accelerate early career teachers experience with how students think when doing algebra in middle or high school as well as to supplement veteran teachers knowledge of content and students The research that this book is based upon can provide teachers with insight into the nature of a student s struggles with particular algebraic ideas to help teachers identify patterns that imply underlying thinking Our book How Students Think When Doing Algebra is not intended to be a how to book for teachers Instead it is intended to orient new teachers to the ways students think and be a book that teachers at all points in their career continually pull of the shelf when they wonder how might my students struggle with this algebraic concept I am about to teach The primary audience for this book is early career mathematics teachers who don t have extensive experience working with students engaged in mathematics However the book can also be useful to veteran teachers to supplement their knowledge and is an ideal resource for mathematics educators who are preparing preservice teachers

Molyneux's Question and the History of Philosophy Gabriele Ferretti,Brian Glenney,2020-09-15 In 1688 the Irish scientist and politician William Molyneux sent a letter to the philosopher John Locke In it he asked him a question could someone who was born blind and able to distinguish a globe and a cube by touch be able to immediately distinguish and name these shapes by sight if given the ability to see The philosophical puzzle offered in Molyneux s letter fascinated not only Locke but major thinkers such as Leibniz Berkeley Diderot Reid and numerous others including psychologists and cognitive scientists today Does such a question represent a philosophical puzzle or a problem that can be solved by experimental tests Can vision be fully restored after blindness What is the relation between vision and touch Are the senses linked through learning or bound at birth Molyneux s Question and the History of Philosophy is a major collection of essays that explore the

long standing issues Molyneux s problem presents to philosophy of mind perception and the senses In addition the volume considers the question from an interdisciplinary angle examines the pre history of the question and aspects of it that have been ignored such as perspectives from religion and disability As such Molyneux s Question and the History of Philosophy presents a set of philosophically rich empirically informed and scientifically rigorous original investigations into this famous puzzle It will be of great interest to students and researchers in philosophy psychology and the cognitive sciences including neuroscience neurobiology and ophthalmology as well as those studying the mind perception and the senses **Beyond**

Shanghai and PISA Binyan Xu,Yan Zhu,Xiaoli Lu,2021-05-07 This book seeks to illustrate the research on mathematics competencies and disposition in China according to the conceptual development and empirical investigation perspective Mathematics education in China has a distinguishing feature a focus of attention to mathematical competency Paradoxically there has not been an explicit refined and measurable evaluation system in place to assess mathematical competency in China While academic achievement surveys or evaluations are common these can only give an overall conclusion about mathematical thinking skills or problem solving abilities In response to this deficiency China is beginning to carry out national projects that emphasize defining both a conceptual framework on core competencies in school mathematics and developing a corresponding assessment framework Thus the main focus of this volume is the current investigations of different mathematics competencies and mathematical disposition of Chinese students with the aim of promoting interaction between domestic and international student performance assessment to provide a more comprehensive understanding of mathematics competencies and disposition in mainland China and to stimulate innovative new directions in research The primary audience of this volume is the large group of researchers interested in mathematics competencies mathematics teaching and learning in China or comparative studies or the relation of the three The book will also appeal to teaching trainers or instructors as well as be an appropriate resource for graduate courses or seminars at either the master s or doctoral level **Elevating Clinical Practice in Mathematics Education** Drew Polly,Christie S. Martin,2025-06-20

Elevating clinical practice in mathematics education has potential to greatly transform the preparation of effective mathematics teachers This book showcases examples of clinical practice in mathematics education with each chapter focused on one of the National Council for Teachers of Mathematics Effective Teaching Practices
