Winston Crawley, 2005-10-07 These active and well known authors have come together to create a fresh innovative and timely approach to Discrete Math One innovation uses several major threads to help weave core topics into a cohesive whole Throughout the book the application of mathematical reasoning is emphasized to solve problems while the authors guide the student in thinking about reading and writing proofs in a wide variety of contexts Another important content thread as the sub title implies is the focus on mathematical puzzles games and magic tricks to engage students

Macmillan/McGraw-Hill Math: Teacher ed., v. 2, 2004

Proof in Mathematics Education David A. Reid, Christine Knipping, 2010-01-01 Research on teaching and learning proof and proving has expanded in recent decades This reflects the growth of mathematics education research in general but also an increased emphasis on proof in mathematics education This development is a welcome one for those interested in the topic but also poses a challenge especially to teachers and new scholars It has become more and more difficult to get an overview of the field and to identify the key concepts used in research on proof and proving

Writing Science Markus Asper, 2013-06-26 Scientific and

technological texts have not played a significant role in modern literary criticism This applies to Classics too despite the fact that a large part of the field's extant texts deal with questions of medicine mathematics and natural philosophy Focusing mostly on medical and mathematical texts this collection aims at approaching ancient Greek science and its texts from the cross disciplinary perspective of authorship Among the questions addressed are What is a scientific author In what respect does scientific writing differ from literary writing How does the author present himself as an authoritative figure through his text What strategies of trust do these authors employ These and related questions cannot be discussed within the typical boundaries of modern academic disciplines thus most of the sixteen authors many of them leading experts in the fields of ancient science bring a comparative perspective to their subjects As a result the collection not only offers a new approach to this vast area of ancient literature thus effectively discovering new possibilities for literary criticism it also reflects on our current forms of scientific and scholarly written communication

Proving in the Elementary Mathematics Classroom

Andreas J. Stylianides, 2016-07-14 Although proving is core to mathematics as a sense making activity it currently has a marginal place in elementary classrooms internationally Blending research with practical perspectives this book addresses what it would take to elevate the place of proving at elementary school The book uses classroom episodes from two countries to examine different kinds of proving tasks and the proving activity they can generate in the elementary classroom It examines further the role of teachers in mediating the relationship between proving tasks and proving activity including major mathematical and pedagogical issues that arise for teachers as they implement each kind of proving task In addition to its contribution to research knowledge the book has important implications for teaching curricular resources and teacher education

The Wrong of Law Valerie Kerruish, 2025-02-19 This book combines metaphysics aspects of modern logic and legal theory in order to conceptualise a wrong in law s claim of right The book takes as its starting point a restriction on the freedom of concept formation that is dictated by classical logic s inability to handle antinomies in reason s attempts to constitute its own foundations Relating this to law s claim of right the notion of wrong does not fasten on law s violence or injustice and neither does it seek to elaborate a moral or ethical critique of law On the contrary it is sceptical of and seeks an alternative to the various ethical turns of recent legal and political theory The wrong of the wrong of law is logical and epistemic in character It is a failure or refusal to recognise the cognitive relevance of contradictions of self reference In this respect The Wrong of Law draws on a metaphysical logical development from Kant via Hegel and Marx to the foundations of modern logic in order to establish the sense in which a restriction on self reference amounts to a limitation on truth seeking or comprehension This limitation is then demonstrated through analysis of the reasoning in a series of legal cases in Australia concerning Indigenous peoples This book will be of significant interest to scholars in critical legal theory the philosophy of law and jurisprudence as well as others with an interest in foundational studies across the disciplinary borders of metaphysics mathematical logic sociology and legal theory
