*Mathematical Relationships in Education* Laura Black, Heather Mendick, Yvette Solomon, 2011-01-13 This book brings together scholars working in the field of mathematics education to examine the ways in which learners form particular relationships with mathematics in the context of formal schooling While demand for the mathematically literate citizen increases many learners continue to reject mathematics and experience it as excluding and exclusive even when they succeed at it In exploring this phenomenon this volume focuses on learners developing sense of self and their understanding of the part played by mathematics in it It recognizes the part played by emotional responses the functioning of classroom communities of practice and by discourses of mathematics education in this process It thus blends perspectives from psychoanalysis socio cultural theory and discursive approaches in a focus on the classic issues of selection and assessment pedagogy curriculum choice and teacher development

Barr, 2007-05-30 The study of electrophysiology has progressed rapidly because of the precise delicate and in nious experimental studies of many investigators The eld has also made great strides by uni ing these experimental observation through mathematical descriptions based on electromagnetic eld theory electrochemistry etc which underlie these experiments In turn these quantitative

materials provide an understanding of many electrophysiological applications through a relatively small number of fundamental ideas. This text is an introduction to electrophysiology following a quantitative approach. The first chapter summarizes much of the mathematics required in the following chapters. The second chapter presents a very concise overview of the principles of electrical fields and the concomitant current flow in conducting media. It utilizes basic principles from the physical sciences and engineering but takes into account the biological applications. The following six chapters are the core material of this text. Chapter 3 includes a description of how voltages and currents exist across membranes and how these are evaluated using the Nernst-Planck equation. The membrane channels which are the basis for cell excitability are described in Chapter 4. An examination of the time course of changes in membrane voltages that produce action potentials are considered in Chapter 5. Propagation of action potentials down fibers is the subject of Chapter 6 and the response of fibers to artificial stimuli such as those used in cardiac pacemakers is treated in Chapter 7. The voltages and currents produced by these active processes in the surrounding extracellular space is described in Chapter 8.
