This book covers the fundamentals of biomolecules their role in living organisms structure sources important characteristics and the industrial applications of these biomaterials. Sections explore amino acids carbohydrates nucleic acids proteins lipids metabolites and natural products then go on to discuss purification techniques and detection methods. Applications in biomolecular engineering biochemistry and biomedical engineering among others are discussed before concluding with coverage of biomolecules as anticorrosion materials. Provides the chronological advancement of biomolecules their biochemical reactions and many modern industrial applications in engineering and science. Serves as a valuable source for researchers interested in the fundamentals basics and modern applications of biomolecules. Covers both synthetic and natural biomolecule synthesis and purification processes and their modern applications. Bridges the gap between the fundamental science of biomolecular chemistry and the relevant technology and industrial applications.
