Mathematics And The Roots Of Postmodern Thought:

Mathematics and the Roots of Postmodern Thought Vladimir Tasic, 2001-08-30 This is a charming and insightful contribution to an understanding of the Science Wars between postmodernist humanism and science driving toward a resolution of the mutual misunderstanding that has driven the controversy It traces the root of postmodern theory to a debate on the foundations of mathematics early in the 20th century then compares developments in mathematics to what took place in the arts and humanities discussing issues as diverse as literary theory arts and artificial intelligence This is a straightforward easily understood presentation of what can be difficult theoretical concepts It demonstrates that a pattern of misreading mathematics can be seen both on the part of science and on the part of postmodern thinking This is a humorous playful yet deeply serious look at the intellectual foundations of mathematics for those in the humanities and the perfect critical introduction to the bases of modernism and postmodernism for those in the sciences

Mathematics and the Roots of Postmodern Thought Vladimir Tasić, 2023 Tasi traces the roots of postmodern theory to a debate on the foundations of mathematics early in the 20th century He compares developments in mathematics with what took place in the arts and humanities

Thinking about Gödel and Turing Gregory J. Chaitin, 2007 Dr Gregory Chaitin one of the world's leading mathematicians is best known for his discovery of the remarkable number a concrete example of irreducible complexity in pure mathematics which shows that mathematics is infinitely complex In this volume Chaitin discusses the evolution of these ideas tracing them back to Leibniz and Borel as well as Gödel and Turing This book contains 23 non technical papers by Chaitin his favorite tutorial and survey papers including Chaitin's three Scientific American articles These essays summarize a lifetime effort to use the notion of program size complexity or algorithmic information content in order to shed further light on the fundamental work of Gödel and Turing on the limits of mathematical methods both in logic and in computation Chaitin argues here that his information theoretic approach to metamathematics suggests a quasi empirical view of mathematics that emphasizes the similarities rather than the differences between mathematics and physics He also develops his own brand of digital philosophy which views the entire universe as a giant computation and speculates that perhaps everything is discrete software everything is 0's and 1's Chaitin's fundamental mathematical work will be of interest to philosophers concerned with the limits of knowledge and to physicists interested in the nature of complexity

Postmodern Philosophy and the Scientific Turn Dorothea E. Olkowski, 2012-04-23 A groundbreaking interdisciplinary approach to the study of consciousness Beautifully written engaging throughout and captivating Claire Colebrook The Pennsylvania State University What can come of a scientific engagement with postmodern philosophy Some scientists have claimed that the social sciences and humanities have nothing to contribute except perhaps peripherally to their research Dorothea E Olkowski shows that mathematics itself the historic link between science and philosophy plays a fundamental role in the development of the worldviews that drive both fields Focusing on language its usage and expression of worldview she develops a

phenomenological account of human thought and action to explicate the role of philosophy in the sciences Olkowski proposes a model of phenomenology both scientific and philosophical that helps make sense of reality and composes an ethics for dealing with unpredictability in our world Deleuze, Bergson, Merleau-Ponty Dorothea E. Olkowski, 2021-09-07 Deleuze Bergson Merleau Ponty The Logic and Pragmatics of Creation Affective Life and Perception offers the only full length examination of the relationships between Deleuze Bergson and Merleau Ponty Henri Bergson 1859 1941 Maurice Merleau Ponty 1908 1961 and Gilles Deleuze 1925 1995 succeeded one another as leading voices in French philosophy over a span of 136 years Their relationship to one another s work involved far more than their overlapping lifetimes Bergson became both the source of philosophical insight and a focus of criticism for Merleau Ponty and Deleuze Deleuze criticized Merleau Ponty s phenomenology as well as his interest in cognitive and natural science Author Dorothea Olkowski points out that each of these philosophers situated their thought in relation to their understandings of crucial developments and theories taken up in the history and philosophy of science and this has been difficult for Continental philosophy to grasp She articulates the differences between these philosophers with respect to their disparate approaches to the physical sciences and with how their views of science function in relation to their larger philosophical projects In Deleuze Bergson Merleau Ponty Olkowski examines the critical areas of the structure of time and memory the structure of consciousness and the question of humans relation to nature She reveals that these philosophers are working from inside one another s ideas and are making strong claims about time consciousness reality and their effects on humanity that converge and diverge The result is a clearer picture of the intertwined workings of Continental philosophy and its fundamental engagement with the sciences

ingredients it uses them to make something else out of them yet the reality of the dish and its properties hugely depend on the reality and the properties of the ingredients Models are not representations understood as pictures but interpretations understood as data elaborations of systems Thus Luciano Floridi articulates and defends the thesis that knowledge is design and philosophy is the ultimate form of conceptual design Although entirely independent of Floridi's previous books *The Philosophy of Information* OUP 2011 and *The Ethics of Information* OUP 2013 *The Logic of Information* both complements the existing volumes and presents new work on the foundations of the philosophy of information

Information—Consciousness—Reality James B. Glattfelder, 2019-04-10 This open access book chronicles the rise of a new scientific paradigm offering novel insights into the age old enigmas of existence Over 300 years ago the human mind discovered the machine code of reality mathematics By utilizing abstract thought systems humans began to decode the workings of the cosmos From this understanding the current scientific paradigm emerged ultimately discovering the gift of technology Today however our island of knowledge is surrounded by ever longer shores of ignorance Science appears to have hit a dead end when confronted with the nature of reality and consciousness In this fascinating and accessible volume James Glattfelder explores a radical paradigm shift uncovering the ontology of reality It is found to be information theoretic and participatory yielding a computational and programmable universe

Interdiscipline Petar Ramadanovic, 2021-11-29 This book brings together two different discussions on the value of the humanities and a broader debate on interdisciplinary scholarship in order to propose a new way beyond current threats to the humanities Petar Ramadanovic offers nothing short of a drastic rehaul of our approaches to literary scholarship the humanities and university systems Beginning with an analysis of what is often referred to as the crises in the humanities the author looks at the specifics of literary studies but also issues around working conditions for academics From precarity and pay conditions to peer review the book has practical as well as theoretical implications that will resonate throughout the humanities While most books defending the humanities emphasize the uniqueness of the subject or area Ramadanovic does the opposite emphasizing the need for interdisciplinarity and combined knowledge This proposal is then fully explored through literary studies and its potential throughout the humanities and beyond into the sciences Interdiscipline is not just a defense of literature and the humanities it offers a clear and inspiring pathway forwards drawing on all disciplines to show their cultural and social significance The book is important

reading for all scholars of literary studies and also throughout the humanities *Natural Philosophy* Alister E.

of history as well as to what we recognize as the unexpected or abnormal. *The Qualities of Time* brings anthropologists and archaeologists together in a new conversation about the patterns of our understanding and experience of time. The authors reflect on how we should interpret evidence about the distant past and how far the structuring of social time is a human universal. They also consider whether anthropology itself has been so oriented to the present it has still to develop ways of dealing with temporality. The interactions of time structures, ceremonies and specific historical events including violence inspired by the millennium are interrogated. The experience of individuals who feel the times are for them out of joint is also examined. By combining socio-cultural, philosophical and historical approaches, this thought-provoking book moves anthropological debates about time's qualities well beyond existing studies. This book explores the relevance of classical ideas in the anthropology of time to the

S(zp, Zp) Roy Wagner, 2009. S(zp, zp) performs an innovative analysis of one of modern logic's most celebrated cornerstones: the proof of Gödel's first incompleteness theorem. The book applies the semiotic theories of French post-structuralists such as Julia Kristeva, Jacques Derrida and Gilles Deleuze to shed new light on a fundamental question: how do mathematical signs produce meaning and make sense? S(zp, zp) analyses the text of the proof of Gödel's result and shows that mathematical language like other forms of language enjoys the full complexity of language as a process with its embodied genesis, constitutive paradoxical forces and unbounded shifts of meaning. These effects do not infringe on the logico-mathematical validity of Gödel's proof. Rather, they belong to a mathematical unconscious that enables the successful function of mathematical texts for a variety of different readers. S(zp, zp) breaks new ground by synthesising mathematical logic and post-structural semiotics into a new form of philosophical fabric and offers an original way of bridging the gap between the two cultures.

Knowledge and the World: Challenges Beyond the Science Wars Martin Carrier, Johannes Roggenhofer, Günter Küppers, Philippe Blanchard, 2013-03-09. The fundamental question of whether or in what sense science informs us about the real world has pervaded the history of thought since antiquity. Is what science tells us about the world determined unambiguously by facts or does the content of any scientific theory in some way depend on the human condition? Sokal's hoax attacked the mere seriousness of post-modern views of science and shifted this controversial debate to a new level which very quickly came to be known as Science Wars. *Knowledge and the World* examines and reviews the broad range of philosophical positions on this issue, extending from realism to relativism, to expound the epistemic merit of science and to tackle the central question: in what sense can science justifiably claim to provide a truthful portrait of reality? Challenges beyond the Science Wars are taken up by contributions of scientists, sociologists and philosophers of science which connect perspectives of a wide variety of disciplines including biology and cultural studies. This book addresses everyone interested in the philosophy and history of science and in particular in the interplay between the social and natural sciences.
