*Linear Algebra* Belkacem Said-Houari, 2017-10-04 This self contained clearly written textbook on linear algebra is easily accessible for students It begins with the simple linear equation and generalizes several notions from this equation for the system of linear equations and introduces the main ideas using matrices It then offers a detailed chapter on determinants and introduces the main ideas with detailed proofs The third chapter introduces the Euclidean

spaces using very simple geometric ideas and discusses various major inequalities and identities. These ideas offer a solid basis for understanding general Hilbert spaces in functional analysis. The following two chapters address general vector spaces including some rigorous proofs to all the main results and linear transformation areas that are ignored or are poorly explained in many textbooks. Chapter 6 introduces the idea of matrices using linear transformation which is easier to understand than the usual theory of matrices approach. The final two chapters are more advanced introducing the necessary concepts of eigenvalues and eigenvectors as well as the theory of symmetric and orthogonal matrices. Each idea presented is followed by examples. The book includes a set of exercises at the end of each chapter which have been carefully chosen to illustrate the main ideas. Some of them were taken with some modifications from recently published papers and appear in a textbook for the first time. Detailed solutions are provided for every exercise and these refer to the main theorems in the text when necessary so students can see the tools used in the solution. *A First Course in Linear Algebra* Daniel

Zelinsky, 2014-05-12 *A First Course in Linear Algebra* provides an introduction to the algebra and geometry of vectors, matrices, and linear transformations. This book is designed as a background for second year courses in calculus of several variables and differential equations where the theory of linear differential equations parallels that of linear algebraic equations. The topics discussed include the multiplication of vectors by scalars, vectors in  $n$  space, planes and lines, and composites of linear mappings. The symmetric matrices and mappings, quadratic forms, change of coordinates, and effect of change of basis on matrices of linear functions are also described. This text likewise considers the computation of determinants, diagonalizable transformations, computation of eigenvalues and eigenvectors, and principal axis theorem. This publication is suitable for college students taking a course in linear algebra. [Linear Algebra](#) Richard Bronson, Gabriel B. Costa, 2007-03-05 In this appealing and well written text, Richard Bronson gives readers a substructure for a firm understanding of the abstract concepts of linear algebra and its applications. The author starts with the concrete and computational and leads the reader to a choice of major applications: Markov chains, least squares approximation, and solution of differential equations using Jordan normal form. The first three chapters address the basics: matrices, vector spaces, and linear transformations. The next three cover eigenvalues, Euclidean inner products, and Jordan canonical forms, offering possibilities that can be tailored to the instructor's taste and to the length of the course. Bronson's approach to computation is modern and algorithmic, and his theory is clean and straightforward. Throughout, the views of the theory presented are broad and balanced. Key material is highlighted in the text and summarized at the end of each chapter. The book also includes ample exercises with answers and hints. With its inclusion of all the needed features, this text will be a pleasure for professionals, teachers, and students. Introduces deductive reasoning and helps the reader develop a facility with mathematical proofs. Gives computational algorithms for finding eigenvalues and eigenvectors. Provides a balanced approach to computation and theory. Superb motivation and writing. Excellent exercise sets ranging from drill to theoretical challenging.
