Mathematics, Science, and Epistemology Imre Lakatos, 1978 Imre Lakatos philosophical and scientific papers are published here in two volumes Volume I brings together his very influential but scattered papers on the philosophy of the physical sciences and includes one important unpublished essay on the effect of Newton's scientific achievement Volume 2 presents his work on the philosophy of mathematics much of it unpublished together with some critical essays on contemporary philosophers of science and some famous polemical writings on political and educational issues

Politics, Volume 2 - Social Theory Roberto Mangabeira Unger, 2020-05-05 Social Theory Its Situation and Its Task is an introduction both to Unger's ideas and to the major debates of contemporary social political and economic thought Unger shows how the failures of social science and the criticism of such ambitious deterministic theories as Marxism offer materials for an alternative practice of social understanding This alternative severs once and for all the link between the explanation of social arrangements and the vindication of their necessity Unger argues that the disappointment of so many liberal and socialist hopes coexists with unforeseen opportunities to advance progressive commitments To seize such opportunities however we must rethink many of our basic beliefs about society about what it is and what it can become Social Theory Its Situation and Its Task shows that what at first seems a circumstance of intellectual and political paralysis turns out to be rich in unrecognized transformative possibility

Language Misconceived Karol Janicki, 2014-06-03 Linguistics is important An understanding of linguistic principles is as essential to the layperson as it is to the language scholar Using concrete examples from politics law and education this book shows how people misconceive language every day and what the consequences of misconceptions can be Since the meanings of words are often fuzzy at best this volume argues for a flexible approach to meaning and definitions and demonstrates how this approach can help us understand many conflicts It is an alternative way of viewing and doing sociolinguistics Language Misconceived Arguing for Applied Cognitive Sociolinguistics is intended primarily for graduate and Ph D students of linguistics especially those interested in applying linguistics to fields like politics law and education It may also be recommended to seasoned linguists as well as researchers in communication sociology psychology and education

Thomas Kuhn's 'Linguistic Turn' and the Legacy of Logical Empiricism Stefano Gattei, 2016-12-05 Presenting a critical history of the philosophy of science in the twentieth century focusing on the transition from logical positivism in its first half to the new philosophy of science in its second Stefano Gattei examines the

influence of several key figures but the main focus of the book are Thomas Kuhn and Karl Popper Kuhn as the central figure of the new philosophy of science and Popper as a key philosopher of the time who stands outside both traditions Gattei makes two important claims about the development of the philosophy of science in the twentieth century that Kuhn is much closer to positivism than many have supposed failing to solve the crisis of neopositivism and that Popper in responding to the deeper crisis of foundationalism that spans the whole of the Western philosophical tradition ultimately shows what is untenable in Kuhn's view Gattei has written a very detailed and fine grained yet accessible discussion making exceptionally interesting use of archive materials

Fuzziness and Foundations of Exact and Inexact Sciences Kofi Kissi Dompere, 2012-08-23 The monograph is an examination of the fuzzy rational foundations of the structure of exact and inexact sciences over the epistemological space which is distinguished from the ontological space It is thus concerned with the demarcation problem It examines exact science and its critique of inexact science The role of fuzzy rationality in these examinations is presented The driving force of the discussions is the nature of the information that connects the cognitive relational structure of the epistemological space to the ontological space for knowing The knowing action is undertaken by decision choice agents who must process information to derive exact inexact or true false conclusions The information processing is done with a paradigm and laws of thought that constitute the input output machine The nature of the paradigm selected depends on the nature of the information structure that is taken as input of the thought processing Generally the information structure received from the ontological space is defective from the simple principles of acquaintances and the limitations of cognitive agents operating in the epistemological space How then do we arrive and claim exactness in our knowledge production system The general conclusion of this book is that the conditions of the fuzzy paradigm with its laws of thought and mathematics present a methodological unity of exact and inexact sciences where every zone of thought has fuzzy covering

Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed Each section offers insights into the origins debates methodologies and newer perspectives that characterize the discipline today Contributions are written by scholars from mathematics history and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of

Dompere, Kofi Kissi, 2017-09-17 The Theory of Categorical Conversion is advanced by Professor Kofi Kissi Dompere as
mathematical philosophical and game theoretic foundations to solve the problem of socio natural transformation as governed
by some internal process in relation to Marx Schumpeter and Nkrumah Dompere's methodology is based on the Africentric
principles of opposites made up of actual potential polarity negative positive duality with relational continuum and unity
under cost benefit rationality and Asantrofi Anoma principle supported by fuzzy paradigm of thought Socio natural
transformations are seen in terms of game theories in a fuzzy stochastic space admitting of defective deceptive information
structures in quality quantity space within the subjective objective duality The main premise of the monograph is that there

exists a set of necessary and sufficient conditions for internal self transformation The necessary conditions are made up of categorial moments and categorial transfer functions forming the domain of control instrumentation in creating the sufficient conditions for categorial conversion processes Dompere presents an important methodological framework for the study and construction of the theories of socioeconomic development and political change as well as info dynamics connecting knowledge sciences innovation and engineering to the space of knowing under qualitative quantitative transformational dynamics with defective deceptive information structures in the games for power and dominance by duals and poles in conflicts The necessary conditions of socio natural transformation are internally derived based on the relational structure of matter energy information activities within the dynamics of qualitative dispositions of dualities of actual potential polarities The theory consists of category formation showing ontological epistemological categories and categorial dynamics shows elemental conversions of categorial varieties in a continuum The logical tools and the paradigm of thought for the theoretical development of Nkrumah s framework involve self excitement self correction and self control systems induced by internal contradictions The set of necessary conditions constitutes the natural necessity that constrains cognitive freedom in socio natural transformations Had this conceptual system been familiar to economists and social scientists the construct of the theories of socioeconomic development and transformations would have been increasingly successful Logos and Alogon Arkady Plotnitsky,2023-01-16 This book is a philosophical study of mathematics pursued by considering and relating two aspects of mathematical thinking and practice especially in modern mathematics which having emerged around 1800 consolidated around 1900 and extends to our own time while also tracing both aspects to earlier periods beginning with the ancient Greek mathematics The first aspect is conceptual which characterizes mathematics as the invention of and working with concepts rather than only by its logical nature The second Pythagorean aspect is grounded first in the interplay of geometry and algebra in modern mathematics and secondly in the epistemologically most radical form of modern mathematics designated in this study as radical Pythagorean mathematics This form of mathematics is defined by the role of that which beyond the limits of thought in mathematical thinking or in ancient Greek terms used in the book s title an alogon in the logos of mathematics The outcome of this investigation is a new philosophical and historical understanding of the nature of modern mathematics and mathematics in general The book is addressed to mathematicians mathematical physicists and philosophers and historians of mathematics and graduate students in these fields *Routledge Library Editions: Historiography* Various,2021-06-23 The greatest problem in historical scholarship theoretically and practically is the relation between historians and their subject matter The past is gone and historians can only study its remnants On what basis do scholars select certain facts from the mass of data left from the past How do they explain the interrelationship of the facts they select What criteria do they use to evaluate their subject The 35 volumes in this set originally published between 1926 and 1990 discuss and answer these essential questions faced by historians The development of historical understanding

during the 18th and 19th centuries was one of the most striking features of Western culture Both historiography and historical thinking advanced as never before The historical movement of the 19th century was perhaps second only to the scientific revolution of the seventeenth century in transforming Western thought One consequence was extensive organisation and professionalization of research which the volumes in this set reflect

Abduction in Context Woosuk Park, 2016-11-23 This book offers a novel perspective on abduction It starts by discussing the major theories of abduction focusing on the hybrid nature of abduction as both inference and intuition It reports on the Peircean theory of abduction and discusses the more recent Magnani concept of animal abduction connecting them to the work of medieval philosophers Building on Magnani's manipulative abduction the accompanying classification of abduction and the hybrid concept of abduction as both inference and intuition the book examines the problem of visual perception together with the related concepts of misrepresentation and semantic information It presents the author's views on caricature and the caricature model of science and then extends the scope of discussion by introducing some standard issues in the philosophy of science By discussing the concept of ad hoc hypothesis generation as enthymeme resolution it demonstrates how ubiquitous the problem of abduction is in all the different individual scientific disciplines This comprehensive text provides philosophers logicians and cognitive scientists with a historical unified and authoritative perspective on abduction

John von Neumann and the Foundations of Quantum Physics Miklós Rédei, Michael Stöltzner, 2013-03-09 John von Neumann 1903-1957 was undoubtedly one of the scientific geniuses of the 20th century The main fields to which he contributed include various disciplines of pure and applied mathematics mathematical and theoretical physics logic theoretical computer science and computer architecture Von Neumann was also actively involved in politics and science management and he had a major impact on US government decisions during and especially after the Second World War There exist several popular books on his personality and various collections focusing on his achievements in mathematics computer science and economy Strangely enough to date no detailed appraisal of his seminal contributions to the mathematical foundations of quantum physics has appeared Von Neumann's theory of measurement and his critique of hidden variables became the touchstone of most debates in the foundations of quantum mechanics Today his name also figures most prominently in the mathematically rigorous branches of contemporary quantum mechanics of large systems and quantum field theory And finally as one of his last lectures published in this volume for the first time shows he considered the relation of quantum logic and quantum mechanical probability as his most important problem for the second half of the twentieth century The present volume embraces both historical and systematic analyses of his methodology of mathematical physics and of the various aspects of his work in the foundations of quantum physics such as theory of measurement quantum logic and quantum mechanical entropy The volume is rounded off by previously unpublished letters and lectures documenting von Neumann's thinking about quantum theory after his 1932 Mathematical Foundations of Quantum Mechanics The general part of the Yearbook

contains papers emerging from the Institute's annual lecture series and reviews of important publications of philosophy of science and its history

Descartes's Mathematical Thought C. Sasaki, 2013-03-09 Covering both the history of mathematics and of philosophy Descartes's Mathematical Thought reconstructs the intellectual career of Descartes most comprehensively and originally in a global perspective including the history of early modern China and Japan Especially it shows what the concept of *mathesis universalis* meant before and during the period of Descartes and how it influenced the young Descartes In fact it was the most fundamental mathematical discipline during the seventeenth century and for Descartes a key notion which may have led to his novel mathematics of algebraic analysis

Lakatos and the Historical Approach to Philosophy of Mathematics Donald Gillies, 2023-12-21 The Element begins by claiming that Imre Lakatos 1922-74 in his famous paper *Proofs and Refutations* 1963-64 was the first to introduce the historical approach to philosophy of mathematics Section 2 gives a detailed analysis of Lakatos' ideas on the philosophy of mathematics Lakatos died at the age of only 51 and at the time of this death had plans to continue his work on philosophy of mathematics which were never carried out However Lakatos' historical approach to philosophy of mathematics was taken up by other researchers in the field and Sections 3 and 4 of the Element give an account of how they developed this approach Then Section 5 gives an overview of what has been achieved so far by the historical approach to philosophy of mathematics and considers what its prospects for the future might be

The Theory of Problem-Solution Dualities and Polarities Kofi Kissi Dompere, 2022-04-25 This book is concerned with the development of the understanding of the relational structures of information knowledge decision choice processes of problems and solutions in the theory and practice regarding diversity and unity principles of knowing science non science and information knowledge systems through dualistic polar conditions of variety existence and nonexistence It is a continuation of the sequence of my epistemic works on the theories on fuzzy rationality info statics info dynamics entropy and their relational connectivity to information language knowing knowledge cognitive practices relative to variety identification problem solution dualities variety transformation problem solution dualities and variety certainty uncertainty principle in all areas of knowing and human actions regarding general social transformations It is also an economic theoretic approach in understanding the diversity and unity of knowing and science through neuro decision choice actions over the space of problem solution dualities and polarities The problem solution dualities are argued to connect all areas of knowing including science and non science social science and non social science into unity with diversities under neuro decision choice actions to support human existence and nonexistence over the space of static dynamic dualities The concepts of diversity and unity are defined and explicated to connect to the tactics and strategies of decision choice actions over the space of problem solution dualities The concepts of problem and solution are defined and explicated not in the space of absoluteness but rather in the space of relativity based on real cost benefit conditions which are shown to be connected to the general parent offspring infinite process where every solution generates new problems which then generates a search

for new solutions within the space of minimum maximum dualities in the decision choice space under the principle of non satiation over the space of preference non preference dualities with analytical tools drawn from the fuzzy paradigm of thought which connects the conditions of the principle of opposites to the conditions of neuro decision choice actions in the zone of variety identifications and transformations The Monograph would be useful to all areas of Research Learning and Teaching at Advanced Stages of Knowing and Knowledge Production *Autós* Riccardo Baldissone, 2020-07-09 Are we doomed to construct reality with the language of being and individuality *Aut s* shows a different perspective by reconsidering the European textual production of individuals Its narration progresses in reverse chronological order to escape teleology it goes from the modern atomized and self sufficient subject to her immediate precursor namely the isolated faithful of Reformation theology and to the amazing proliferation of medieval bodies after the Late Antique narrow individuation of the Christian persona Roman law mostly escapes the latter s definitional approach which first appears in Greek speculation here the vocabulary of being and identity takes shape as exemplified by the new Platonic deployment of the word *aut s* which has both the sense of same and self The Homeric epic instead shows us a discursive regime that precedes the invention of body mind being and self Taking further old and new examples the book seeks to provincialize the technologies of the self through a new vocabulary of incorporation whose sphere of action is not the being of entities but the performing of practices

by major influences on the thinker concerned e.g. Plato, Kant, Wittgenstein. *Nonstandard Methods and Applications in Mathematics* Nigel J. Cutland, Mauro Di Nasso, David A. Ross, 2017-03-30. Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians. Many of the original books in the series have been unavailable for years but they are now in print once again. This volume, the twenty-fifth publication in the Lecture Notes in Logic series, grew from a conference on Nonstandard Methods and Applications in Mathematics held in Pisa, Italy, from 12-16 June 2002. It contains ten peer-reviewed papers that aim to provide something more timely than a textbook but less ephemeral than a conventional proceedings. Nonstandard analysis is one of the great achievements of modern applied mathematical logic. These articles consider the foundations of the subject as well as its applications to pure and applied mathematics and mathematics education.

Is There Progress in Economics? Stephan Boehm, 2002-01-01. Is There Progress in Economics should be given relatively high marks. First, the quality of the papers is quite high and second, the editors did a relatively good job of selecting, arranging, and editing the contributions so that the volume really does focus on the question in its title. The editors' introduction also contributes to the overall effect by attempting to tie all of the papers together into a reasonably tight bundle.

D. Wade Hands, *Economic Record*. This thought-provoking book discusses the concept of progress in economics and investigates whether any advance has been made in its different spheres of research. The authors look back at the history, successes, and failures of their respective fields and thoroughly examine the notion of progress from an epistemological and methodological perspective. The idea of progress is particularly significant as the authors regard it as an essentially contested concept which can be defined in many ways: theoretically or empirically, locally or globally, or as encouraging or impeding the existence of other research traditions. The authors discuss the idea that for progress to make any sense, there must be an accumulation of knowledge built up over time rather than the replacement of ideas by each successive generation. Accordingly, they are not concerned with estimating the price of progress, reminiscing in the past, or assessing what has been lost. Instead, they apply the complex mechanisms and machinery of the discipline to sub-fields such as normative economics, monetary economics, trade and location theory, Austrian economics, and classical economics to critically assess whether progress has been made in these areas of research. Bringing together authoritative and wide-ranging contributions by leading scholars, this book will challenge and engage those interested in philosophy, economic methodology, and the history of economic thought. It will also appeal to economists in general who are interested in the advancement of their profession.
