math teachers everywhere must be fully supported in developing the specific skills that are ideal for educating all students. The authors' discussion focuses on four principles for improving math teaching and learning fidelity to reform efforts by all involved: an emphasis on instruction and instructional tools, the critical nature of mathematical knowledge and the need for transformational change. *Winning the Math Wars* is an important book for policy makers, school leaders, practitioners of mathematics education, parents, and anyone who wants to make sense of the math wars. Martin Abbott, Ph.D., is director of the WSRC and professor of sociology at Seattle Pacific University. He specializes in evaluation research and statistical analysis of large data sets. Duane Baker, Ed.D., is president of The BERC Group and an expert in assessment, classroom observation, and teaching reforms. **Numerical Validation in Current Hardware Architectures** Annie A.M. Cuyt, Walter Krämer, Wolfram Luther, Peter Markstein, 2009-04-24. The major emphasis of the Dagstuhl Seminar on Numerical Validation in Current Hardware Architectures lay on numerical validation in current hardware architectures and software environments. The general idea was to bring together experts who are concerned with computer arithmetic in systems with actual processor architectures and scientists who develop use and need techniques from verified computation in their applications. Topics of the seminar therefore included: The ongoing revision of the IEEE 754-854 standard for floating point arithmetic. Feasible ways to implement multiple precision multiword arithmetic and to compute the actual precision at run time according to the needs of input data. The achievement of a similar behavior of fixed point floating point and interval arithmetic across language compliant implementations. The design of robust and efficient numerical programs portable from diverse computers to those that adhere to the IEEE standard. The development and propagation of validated special purpose software in different application areas. Error analysis in several contexts. Certification of numerical programs. Verification and validation assessment. Computer arithmetic plays an important role at the hardware and software level when microprocessors, embedded systems or grids are designed. The reliability of numerical software strongly depends on the compliance with the corresponding floating point norms. Standard CISC processors follow the 1985 IEEE norm 754 which is currently under revision but the new highly performing CELL processor is not fully IEEE compliant.

*Becoming a Multicultural Educator* William A. Howe, Penelope L. Lisi, 2023-08-30. *Becoming a Multicultural Educator* Fourth Edition focuses on the development and application of research-based curriculum, instruction, and assessment strategies for multicultural education in PK-12 classrooms. This practical book prepares readers to teach in culturally responsive ways, develop a critical understanding of culture and its powerful influence on teaching and learning, and feel empowered to confront and address timely issues.
