**INTRODUCTION:** The United States Weather Service is a division of the National Oceanic and Atmospheric Administration (NOAA). Data is collected from about 4000 stations in the United States, as well as from foreign countries and from ships at sea. This information is instrumental in weather, energy, ozone, ozone depletion, and CFC work. The weather data plots that meteorologists use synoptically, maps which is used to predict any weather changes.

Weather meteorologists analyze conditions, and forecast for different geographic areas of the United States. The National Weather Service Forecast Center in Kansas City, Missouri, produces and distributes forecasts, while the Bureau was directed by the National Hurricane Center in Miami, Florida. In addition to using meteorological synoptic maps for forecast, there is also weather conditions. These conditions also include meteorological maps and NOAA's best weather and forecast system.

**OBJECTIVE:** Analyze a map of synoptic weather maps and determine the location of a weather system and make a 24-hour prediction for a given location. This will use weather maps and a forecast and a forecast for synoptic data interpretation of the weather system.
