The West and the Word Steffen Wöll, 2020-10-12 Western expansion in North America has mainly been described as either a linear sequence energized by nineteenth century nation building processes at a moving frontier or as the practice of settler colonialism and its exploitation of resources and displacement of nonwhite peoples This book suggests that shifting the focus from this binary pattern towards spatial imaginations and spatialization processes a new theoretical framework developed at SFB 1199 provides novel insights into the placemaking dynamics of the American West It brings to light a

discursive diversity that often contradicts unidirectional interpretive patterns. It becomes clear that while some discourses solidified into spatial metanarratives like the character shaping clash of civilizations at the frontier or manifest destiny, alternative spatial imaginations exist juxtaposed to or obfuscated by canonical interpretations. Making use of a variety of sources including works of literature, poetry, newspapers, paintings, and speeches to access spatialization processes on several sociocultural scales, the book presents a careful exploration of the parameters that informed the creation, affirmation, and subversion of spatial imagination of the American West throughout the nineteenth century from the perspective of American Studies.

Somatic States Franck Billé, 2025-02-28. In *Somatic States*, Franck Bill examines the conceptual link between the nation-state and the body, particularly the visceral and affective attachment to the state and the symbolic significance of its borders. Bill argues that corporeal analogies to the nation-state are not simply poetic or allegorical but reflect a genuine association of the individual body with the national outline, an identification greatly facilitated by the emergence of the national map. Bill charts the evolution of cartographic practices and the role that political maps have played in transforming notions of territorial sovereignty. He shows how states routinely and effectively mobilize corporeal narratives such as framing territorial loss through metaphors of dismemberment and mutilation. Despite the current complexity of geopolitics and neoliberalism, Bill demonstrates that corporeality and bodily metaphors remain viscerally powerful because they offer a seemingly simple way to apprehend the abstract nature of the nation-state.

Thinking with Maps Bertram C. Bruce, 2021-05-15. A 2022 Choice Reviews Outstanding Academic Title. Spatial reasoning, which promises connection across wide areas, is itself ironically often not connected to other areas of knowledge. *Thinking with Maps: Understanding the World through Spatialization* addresses this problem, developing its argument through historical analysis and cross-disciplinary examples involving maps. The idea of maps here includes traditional cartographic representations of physical environments but more broadly encompasses the wide variety of ways that visualizations are used across all disciplines to enable understanding, to generate new knowledge, and to effect change. The idea of thinking with maps is also used broadly. Maps become not simply one among many items to learn about but indispensable tools for thinking across every field of inquiry in a way similar to that of textual and mathematical language. Effective use of maps becomes a way to make knowledge, much as writing or mathematical exploration not only displays ideas but also creates them. The book shows that maps for thinking are not just a means to improve geographic knowledge as valuable as that may be. Instead, they provide mechanisms for rejuvenating our engagement with the world, helping us to become more capable of facing our global challenges. This book has a broader aim. It is fundamentally about general principles of how we learn and know. It calls for a renewed focus on democratic education in which both the means and ends are democratic. Education, just as the political realm should follow Dewey's dictum that democratic ends need democratic methods for their realization. Maps and mapping are invaluable in that endeavor.
