Guide to Information Sources in Mathematics and Statistics Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

Scientific Computing with MATLAB Dingyu Xue, YangQuan Chen, 2018-09-03 Scientific Computing with MATLAB Second Edition improves students ability to tackle mathematical problems It helps students understand the mathematical background and find reliable and accurate solutions to mathematical problems with the use of MATLAB avoiding the tedious and complex technical details of mathematics This edition retains the structure of its predecessor while expanding and updating the content of each chapter The book bridges the gap between problems and solutions through well grouped topics and clear MATLAB example scripts and reproducible MATLAB generated plots Students can effortlessly experiment with the scripts for a deep hands on exploration Each chapter also includes a set of problems to strengthen understanding of the material

Reaction Kinetics: Exercises, Programs and Theorems János Tóth, Attila László Nagy, Dávid Papp, 2018-09-18 Fifty years ago a new approach to reaction kinetics began

to emerge one based on mathematical models of reaction kinetics or formal reaction kinetics Since then there has been a rapid and accelerated development in both deterministic and stochastic kinetics primarily because mathematicians studying differential equations and algebraic geometry have taken an interest in the nonlinear differential equations of kinetics which are relatively simple yet capable of depicting complex behavior such as oscillation chaos and pattern formation The development of stochastic models was triggered by the fact that novel methods made it possible to measure molecules individually Now it is high time to make the results of the last half century available to a larger audience students of chemistry chemical engineering and biochemistry not to mention applied mathematics Based on recent papers this book presents the most important concepts and results together with a wealth of solved exercises The book is accompanied by the authors Mathematica package ReactionKinetics which helps both students and scholars in their everyday work and which can be downloaded from <http://extras.springer.com> and also from the authors websites Further the large set of unsolved problems provided may serve as a springboard for individual research

Stochastic and Statistical Methods in Hydrology and Environmental Engineering
 Keith W. Hipel, 2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to obtain a better understanding of environmental problems so that effective remedial action can be taken Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions stochastic and statistical models have major roles to play in the protection and restoration of our natural environment Consequently the main objective of this edited volume is to present some of the most up to date and promising approaches to stochastic and statistical modelling especially with respect to groundwater and surface water applications Contents As shown in the Table of Contents the book is subdivided into the following main parts GENERAL ISSUES PART I PART II GROUNDWATER PART III SURFACE WATER PART IV STOCHASTIC OPTIMIZATION PART V MOMENT ANALYSIS PART VI OTHER TOPICS Part I raises some thought provoking issues about probabilistic modelling of hydro logical and environmental systems The first two papers in Part I are in fact keynote papers delivered at an international environmetrics conference held at the University of Waterloo in June 1993 in honour of Professor T E Unny In his keynote paper Dr S J Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering Additionally Dr Burges stresses the need for developing a sound scientific basis for the field of hydrology Professor P E
