Facilitation is a process in which a trained consultant through color symbols and metaphors in murals interprets and documents something as short as a keynote address or as long as an entire conference. The text provides a new and exciting avenue for art therapists and for organizational development consultants. The authors provide a detailed explanation of Graphic Facilitation, what it is, how and why it works, ideas about how to become a trained Graphic Facilitator, and a multidisciplinary literature base and resources that aspiring Graphic Facilitators will need. The book's references and bibliography include pertinent classic organizational development literature, essential learning for work in the area. Five case studies carefully lay out how the Graphic Facilitation process works in practice with a variety of organizational styles, models, and issues. They include visual murals and other imagery created by the Graphic Facilitator for each organizational event. These case studies clearly illustrate the value and promise of art therapy as an exciting new tool and provide a view of the impressive use of Graphic Facilitation. Written by two art therapists, this book is for art therapists who would like to develop and learn to use art therapy applications for business and organizational sectors. In this, it is an exciting new practice area for art therapists. The book will also be valuable for business coaches, human resource managers, organizational management consultants, and facilitators who would like to enrich their practice with Graphic Facilitation techniques. The Mislabeled Child Brock Eide, Fernette Eide, 2006-08-01 An incredibly reassuring approach by two physicians who specialize in helping children overcome their difficulties in learning and succeeding in school. For parents, teachers, and other professionals seeking practical guidance about ways to help children with learning problems, this book provides a comprehensive look at learning differences ranging from dyslexia to dysgraphia to attention problems to giftedness. In *The Mislabeled Child*, the authors describe how a proper understanding of a child's unique brain-based strengths can be used to overcome many different obstacles to learning. They show how children are often mislabeled with diagnoses that are too broad (ADHD, for instance) or are simply inaccurate. They also explain why medications are often not the best ways to help children who are struggling to learn. The authors guide readers through the morass of commonly used labels and treatments, offering specific suggestions that can be used to help children at school and at home. This book offers extremely empowering information for parents and professionals alike. *The Mislabeled Child* examines a full spectrum of learning disorders from dyslexia to giftedness, clarifying the diagnoses and providing resources to help. The Eides explain how a learning disability encompasses more than a behavioral problem; it is also a brain dysfunction that should be treated differently.
