

Mathematics Standards -Third Grade

Name: _____

Operations and Algebraic Thinking				
Represent and solve problems involving multiplication and division.				
1. Interpret products of whole numbers, e.g., interpret 5×7 as the total number of objects in 5 groups of 7 objects each. For example, describe a context in which a total number of objects can be represented as 5×7 .				
2. Interpret whole-number quotients of whole numbers, e.g., interpret $56 \div 8$ as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each. For example, describe a context in which a number of shares or a number of groups can be represented as $56 \div 8$.				
3. Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.				
4. Determine the unknown whole number in a multiplication or division equation relating three whole numbers. For example, determine the unknown number that makes the equation true in each of the equations $8 \times ? = 48$, $5 = 3 \times ?$, $42 \div ? = 7$.				
Understand properties of multiplication and the relationship between multiplication and division.				
5. Apply properties of operations as strategies to multiply and divide. Examples: If $8 \times 5 = 40$ is known, then $5 \times 8 = 40$ is also known. (Commutative property of multiplication.) $3 \times 5 = 15$ can be found by $3 \times 5 = 15$, then $15 \div 3 = 5$, or by $5 \times 3 = 15$, then $5 \times 3 = 15 \div 3 = 5$. (Associative property of multiplication.) Knowing that $8 \times 5 = 40$ and $8 \times 2 = 16$, one can find 8×7 as $8 \times (5 + 2) = (8 \times 5) + (8 \times 2) = 40 + 16 = 56$. (Distributive property.)				
6. Understand division as an unknown-factor problem. For example, find $32 \div 8$ by finding the number that makes $8 \times ?$ when multiplied by 8.				
Multiply and divide within 100.				
7. Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.				
Solve problems involving the four operations, and identify and explain patterns in arithmetic.				
8. Solve two-step word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies (including rounding).				
9. Identify arithmetic patterns (including patterns in the addition table or multiplication table), and explain them using properties of operations. For example, observe that 4 times a number is always even, and explain why 4 times a number can be decomposed into two equal addends.				
Numbers and Operations in Base Ten				
Use place-value understanding and properties of operations to perform multi-digit arithmetic.				
1. Use place-value understanding to round whole numbers to the nearest 10 or 100.
