Calculated Surprises Johannes Lenhard, 2019-02-11 Simulation modeling the core thesis of Calculated Surprises is transforming the established conception of mathematical modeling in fundamental ways These transformations feed back into philosophy of science opening up new perspectives on longstanding oppositions The book integrates historical features with both practical case studies and broad reflections on science and technology

Mathematical Modelling and Computer Simulation of Biomechanical Systems A. V. Zinkovsky, V. A. Sholuha, A. A. Ivanov, 1996 The book presents a new scientific approach to the problem of biomechanical systems description This approach is based on development of a universal anthropomorphic model and employment of methodology of imitational dynamic modeling IDM The novelty of this approach is that there appears a possibility to operate with a whole class of models derived from the universal model on the basis of motion separation principle This is followed by utilization of iterational procedures realizing the method of successive approximations and

resulting in description of the real motion with the pre set accuracy level By use of the IDM there has been for the first time ascertained certain laws governing human locomotions presence of so called controlling and stabilizing interlink moments wavelike speeding of forces extremums along the kinematic chain adaptation of control functions for astronauts motion coordination preservation The book includes new theoretical conceptions explaining the deterioration of functional state of skeletal muscular apparatus of astronauts due to zero gravity influence

Mathematical Models and Computer Simulations for Biomedical Applications Gabriella Bretti,Roberto Natalini,Pasquale Palumbo,Luigi Preziosi,2023-09-17

Mathematical modelling and computer simulations are playing a crucial role in the solution of the complex problems arising in the field of biomedical sciences and provide a support to clinical and experimental practices in an interdisciplinary framework Indeed the development of mathematical models and efficient numerical simulation tools is of key importance when dealing with such applications Moreover since the parameters in biomedical models have peculiar scientific interpretations and their values are often unknown accurate estimation techniques need to be developed for parameter identification against the measured data of observed phenomena In the light of the new challenges brought by the biomedical applications computational mathematics paves the way for the validation of the mathematical models and the investigation of control problems The volume hosts high quality selected contributions containing original research results as well as comprehensive papers and survey articles including prospective discussion focusing on some topical biomedical problems It is addressed but not limited to research institutes academia and pharmaceutical industries

Mathematical Modeling and Computer Simulation of Mass Transfer in Simple Multiple Drop Systems S. Ramachandran,1986 *Mathematical Modelling* J. Caldwell,Douglas K.S. Ng,2004-03-31 Over the past decade there has been an increasing demand for suitable material in the area of mathematical modelling as applied to science engineering business and management Recent developments in computer technology and related software have provided the necessary tools of increasing power and sophistication which have significant implications for the use and role of mathematical modelling in the above disciplines In the past traditional methods have relied heavily on expensive experimentation and the building of scaled models but now a more flexible and cost effective approach is available through greater use of mathematical modelling and computer simulation In particular developments in computer algebra symbolic manipulation packages and user friendly software packages for large scale problems all have important implications in both

the teaching of mathematical modelling and more importantly its use in the solution of real world problems Many textbooks have been published which cover the art and techniques of modelling as well as specific mathematical modelling techniques in specialist areas within science and business In most of these books the mathematical material tends to be rather tailor made to fit in with a one or two semester course for teaching students at the undergraduate or postgraduate level usually the former This textbook is quite different in that it is intended to build on and enhance students modelling skills using a combination of case studies and projects

Mathematical Modeling and Simulation in Enteric Neurobiology Roustem Miftahof, Hong Gil Nam, David L. Wingate, 2009 The lack of scientists equally trained and prepared to understand both mathematics and biology medicine hampers the development and application of computer simulation methods in biology and neurogastrobiology Currently there are no texts for navigating the extensive and intricate field of mathematical and computational modeling in neurogastrobiology This book bridges the gap between mathematicians computer scientists and biologists and thus assists in the study and analysis of complex biological phenomena that cannot be done through traditional in vivo and in vitro experimental approaches The book recognizes the complexity of biological phenomena under investigation and treats the subject matter with a degree of mathematical rigor Special attention is given to computer simulations for interpolation and extrapolation of electromechanical and chemoelectrical phenomena nonlinear self sustained electromechanical wave activity pharmacological effects including co localization and co transmission by multiple neurotransmitters receptor polymodality and drug interactions Mathematical Modeling and Simulation in Enteric Neurobiology is an interdisciplinary book and is an essential source of information for biologists and doctors who are interested in knowing about the role and advantages of numerical experimentation in their subjects as well as for mathematicians who are interested in exploring new areas of applications
