Optimal Trajectory Tracking of Nonlinear Dynamical Systems Jakob Löber, 2016-12-20 By establishing an alternative foundation of control theory this thesis represents a significant advance in the theory of control systems of interest to a broad range of scientists and engineers While common control strategies for dynamical systems center on the system state as the object to be controlled the approach developed here focuses on the state trajectory The concept of precisely realizable trajectories identifies those trajectories that can be accurately achieved by applying appropriate control signals The resulting simple expressions for the control signal lend themselves to immediate application in science and technology The approach permits the generalization of many well known results from the control theory of linear systems e g the Kalman rank condition to nonlinear systems The relationship between controllability optimal control and trajectory tracking are clarified Furthermore the existence of linear structures underlying nonlinear optimal control is revealed enabling the derivation of exact analytical solutions to an entire class of nonlinear optimal trajectory tracking problems The clear and self contained presentation focuses on a general and mathematically rigorous analysis of controlled dynamical systems The concepts developed are visualized with the help of particular dynamical systems motivated by physics and chemistry

Nonlinear Dynamics in Physiology and Medicine Anne Beuter, Leon Glass, Michael C. Mackey, Michele S. Biohybrid Systems Ranu Jung, 2012-09-19 The discipline of neurodesign is a highly interdisciplinary one while at the same time in the process of maturing towards real life applications The breakthrough about

to be achieved is to close the loop in communication between neural systems and electronic and mechatronic systems and actually let the nervous system adapt to the feedback from the man made systems To master this loop scientists need a sound understanding of neurology from the cellular to the systems scale of man made systems and how to connect the two These scientists comprise medical scientists neurologists and physiologists engineers as well as biophysicists And they need the topics in a coherently written work with chapters building upon another
