Kong Wan,2019-07-09 The mathematical formalism of quantum theory in terms of vectors and operators in infinite dimensional complex vector spaces is very abstract The definitions of many mathematical quantities used do not seem to have an intuitive meaning which makes it difficult to appreciate the mathematical formalism and understand quantum mechanics This book provides intuition and motivation to the mathematics of quantum theory introducing the mathematics in its simplest and familiar form for instance with three dimensional vectors and operators which can be readily understood Feeling confident about and comfortable with the mathematics used helps readers appreciate and understand the concepts and formalism of quantum mechanics This book is divided into four parts Part I is a brief review of the general properties of classical and quantum systems A general discussion of probability theory is also included which aims to help in understanding the

probability theories relevant to quantum mechanics Part II is a detailed study of the mathematics for quantum mechanics Part III presents quantum mechanics in a series of postulates Six groups of postulates are presented to describe orthodox quantum systems Each statement of a postulate is supplemented with a detailed discussion To make them easier to understand the postulates for discrete observables are presented before those for continuous observables Part IV presents several illustrative applications which include harmonic and isotropic oscillators charged particle in external magnetic fields and the Aharonov Bohm effect For easy reference definitions theorems examples comments properties and results are labelled with section numbers Various symbols and notations are adopted to distinguish different quantities explicitly and to avoid misrepresentation Self contained both mathematically and physically the book is accessible to a wide readership including astrophysicists mathematicians and philosophers of science who are interested in the foundations of quantum mechanics
