Toward Technology-Integrated Aesthetic Experiences in School Mathematics

Lingguo Bu and Markus Hohenwarter

Abstract Dynamic mathematics learning technologies support a model-centered approach to mathematics teaching and learning, which enhances students' and teachers' mathematical experience in the STEM disciplines toward mathematical understanding and aesthetic feelings. This chapter first reviews the theoretical foundation of model-centered learning and instruction and then elaborates a model-centered perspective on the teaching and learning of middle and high school mathematics, integrating emerging dynamic and interactive mathematical learning technologies (e.g., GeoGebra) and drawing illustrative cases from recent mathematics teacher development projects and classroom experiments. Specific mathematical topics are discussed to showcase the transformative nature of dynamic mathematics in supporting sense-making and enriching classroom discussions. Using mathematical modeling and didactical modeling as a primary theme, this chapter illustrates the generative power of emerging digital technologies in addressing new standards for mathematical practices. Modeling not only provides a pathway toward mathematical understanding and self-assessment, but also allows students to experience the aesthetic dimension of mathematical inquiry in the broad context of STEAM education.
