Mathematical Reasoning Raymond Nickerson, 2011-02-25 The development of mathematical competence both by humans as a species over millennia and by individuals over their lifetimes is a fascinating aspect of human cognition This book explores when and why the rudiments of mathematical capability first appeared among human beings what its fundamental concepts are and how and why it has grown into the richly branching complex of specialties that it is today It discusses whether the truths of mathematics are discoveries or inventions and what prompts the emergence of concepts that appear to be descriptive of nothing in human experience Also covered is the role of esthetics in mathematics What exactly are mathematicians seeing when they describe a mathematical entity as beautiful There is discussion of whether mathematical disability is distinguishable from a general cognitive deficit and whether the potential for mathematical reasoning is best developed through instruction This volume is unique in the vast range of psychological questions it covers as revealed in the work habits and products of numerous mathematicians It provides fascinating reading for researchers and students with an interest in cognition in general and mathematical cognition in particular Instructors of mathematics will also find the book's insights illuminating

Decision Analysis, Location Models, and Scheduling Problems H. A. Eiselt, Carl-Louis Sandblom, 2013-06-04 The purpose of this book is to provide readers with an introduction to the fields of decision making location analysis and project and machine scheduling The combination of these topics is not an accident decision analysis can be used to investigate decision scenarios in general location analysis is one of the prime examples of decision making on the strategic level project scheduling is typically concerned with decision making on the tactical level and machine scheduling deals with decision making on the operational level Some of the chapters were originally contributed by different authors and we have made every attempt to unify the notation style and most importantly the level of the exposition Similar to our book on Integer Programming and Network Models Eiselt and Sandblom 2000 the emphasis of this volume is on models rather than solution methods This is particularly important in a book that purports to promote the science of decision making As such advanced undergraduate and graduate students as well as practitioners will find this volume beneficial While different authors prefer different degrees of mathematical sophistication we have made every possible attempt to unify the approaches provide clear explanations and make this volume accessible to as many readers as possible
