

## MATHEMATICAL REASONING

1. There are two types of reasoning the deductive and inductive. Deductive reasoning was developed by Aristotle, Thales, Pythagoras in the classical Period (600 to 300 B.C.).
2. In deduction, given a statement to be proven, often called a conjecture or a theorem, valid deductive steps are derived and a proof may or may not be established. Deduction is the application of a general case to a particular case.
3. Inductive reasoning depends on working with each case, and developing a conjecture by observing incidence till each and every case is observed.
4. Deductive approach is known as the top-down" approach". Given the theorem which is narrowed down to specific *hypotheses* then to *observation*. Finally the hypotheses is tested with specific data to get the *confirmation* (or not) of original theory.

5. Mathematical reasoning is based on deductive reasoning.
