The Three Waves of Reform in the World of Education 1918 - 2018 Ami Volansky, 2023-01-01 This book reviews one hundred years of educational reforms worldwide Characterized by a tension between governing public and professional forces the waves of educational reform reflect myriad efforts to define and fulfill professional and public expectations for the world of education The first wave of reform based on progressive ideals spread across the globe after World War I striving to place the student at the center of the education process and respond to the diverse needs of children and youth in a world that included massive population shifts The second wave nearly obliterated the ideals of the progressive movement that had prevailed for sixty years Drawing its principles from the business world the second wave imposed competition uniform standards and measurable outputs on students teachers and schools even at the cost of harming at risk populations and encouraging the infiltration of private sector values into public education systems The third wave was launched at the turn of the twenty first century Seeking to adjust instructional methods to modern reality this reform rejected standardized curricula in favor of developing skills such as independent thinking curiosity innovation collaboration among learners and the ability to mine and process information Book I reviews the three waves of reform in the United States England Canada Japan Singapore Hong Kong Australia and Finland Book II focuses on Israel s education system past present and future

Languages and the Internationalisation of Higher Education Dolores González-Álvarez, Esperanza Rama-Martínez, 2020-03-30 This volume offers an overview of the context of

internationalisation in which plurilingualism becomes a strategic axis for universities and in which university language centres serve as the key instrument to implement this process. It focuses on three key areas in which language centres are working together with governments across Europe: namely language policy and internationalisation, specific training for the university community and language testing and accreditation. The contributors to this book are all policy makers, instructors or evaluators from university language centres involved in the internationalisation of their institutions through languages. They teach and evaluate not only regular students but students with very specific needs such as lecturers delivering content courses in English, students in mobility programmes or administrative staff in contact with international students. The book also includes the presentation of the first national higher education language policy in Europe developed by the Language Policy Commission of the Board of Rectors of Spanish Universities and endorsed by all public and private universities in Spain.

Flow and Transformations in Porous Media Renaud Toussaint, Bjørnar Sandnes, Daniel

Koehn, Piotr Szymczak, Einat Aharonov, 2017-02-07

Fluid flow in transforming porous rocks, fracture networks and granular media is a very active interdisciplinary research subject in Physics, Earth Sciences and Engineering. Examples of natural and engineered processes include hydrocarbon recovery, carbon dioxide geo-sequestration, soil drying and wetting, pollution remediation, soil liquefaction, landslides, dynamics of wet or dry granular media, dynamics of faulting or friction, volcanic

eruptions gas venting in sediments karst development and speleogenesis ore deposit development and radioactive waste disposal Hydrodynamic flow instabilities and pore scale disorder typically result in complex flow patterning In transforming media additional mechanisms come into play compaction de compaction erosion segregation and fracturing lead to changes in permeability over time Dissolution precipitation and chemical reactions between solutes and solids may gradually alter the composition and structure of the solid matrix either creating or destroying permeable paths for fluid flow A complex dynamic feedback thus arises where on the one hand the fluid flow affects the characteristics of the porous medium and on the other hand the changing medium influences the fluid flow This Research Topic Ebook presents current research illustrating the depth and breadth of ongoing work in the field of flow and transformation in porous media through 15 papers by 72 authors from around the world The body of work highlights the challenges posed by the vast range of length and time scales over which subsurface flow processes occur Importantly phenomena from each scale contribute to the larger scale behavior The flow of oil and gas in reservoirs and the flow of groundwater on catchment scale is sensitively linked to pore scale processes and material heterogeneity down to the micrometer scale The geological features of the same reservoirs and catchments evolved over millions of years sometimes as a consequence of cracking and fracture growth occurring on the time scale of microseconds The research presented by the authors of this Research Topic represents a step toward bridging the separation of scales as well as the separation of scientific disciplines so that a more unified picture of flow and transformation in porous media can start to emerge
