Information and Communication Technologies in Healthcare Stephan Jones, Frank M. Groom, 2011-11-08 As the population ages and healthcare costs continue to soar the focus of the nation and the healthcare industry turns to reducing costs and making the delivery process more efficient Demonstrating how improvements in information systems can lead to improved patient care Information and Communication Technologies in Healthcare explains how to create a holistic Medical Records System as a core component to addressing the issues affecting the U S healthcare system Examining the impact of our aging population on healthcare the book describes the range of systems that support key segments of the industry including hospitals physicians imaging and nursing It considers patient records the physician s office emerging home monitoring networks the recording and information submitting process and hospice nursing home use Leaving no stone unturned this reference investigates Healthcare technology Healthcare data standards Healthcare information exchange Legal and regulatory issues Electronic medical records Usability by patients and physicians Security and privacy Healthcare facility planning Emerging media and healthcare The book includes a case study that illustrates the human factors behind the implementation of technology Following the principle that data should be captured only once stored in a repository and then made available throughout the medical system this is the ideal starting point for those looking to improve the effectiveness and cost efficiencies of the healthcare system

Handbook of Research on ICTs for Human-Centered Healthcare and Social Care Services Cruz-Cunha, Maria

Manuela,2013-04-30 In addition to creating the opportunity for collaboration transformation and innovation in the healthcare industry technology plays an essential role in the development of human well being and psychological growth Handbook of Research on ICTs for Human Centered Healthcare and Social Services is a comprehensive collection of relevant research on technology and its developments of ICTs in healthcare and social services This book focuses on the emerging trends in the social and healthcare sectors such as social networks security of ICTs and advisory services beneficial to researchers

scholars students and practitioners to further their interest in technological advancements *Enabling Health and Healthcare through ICT* Omid Shabestari,Alex Mu-Hsing Kuo,2013-02-15 For many people in both developing and developed countries universal healthcare is still not the norm Socio economic status and geographical restrictions have proved to be major barriers to accessible care The use of information and communication technologies ICT is growing rapidly internationally as the need to provide more efficient and cost effective care becomes increasingly urgent Improving the health of a nation begins with the individual and recent developments in genomics and mobile networked information technologies have regenerated interest in individualizing healthcare Harnessing the diversity and ubiquity of available ICT may be one of the keys to enabling more accessible healthcare across both geographic and socio economic divides This book presents the proceedings of the 2013 Information Technology and Communication in Health ITCH 2013 conference This conference entitled Available Tailored and Closer was held in Victoria BC Canada in February 2013 The theme of the ITCH 2013 conference was realizing the enabling potential of information and communications technology worldwide Papers in this book are arranged according to subject Sections include electronic health records telecare telemedicine and telelaboratory public health informatics clinical decision support systems human computer interaction patient safety and healthcare modeling among others This book will be of interest to all those involved in providing improved and cost effective healthcare worldwide *Information and Communication Technologies for Women's Socioeconomic Empowerment* Samia

Melhem,Claudia Morrell,Nidhi Tandon,2009-10-02 This paper reviews how women in the developing world access and use information and communication technology ICT It examines the discourse and controversies surrounding the digital gender

divide including links to poverty and illiteracy Major themes concerning women and ICTs are explored such as women in the ICT workforce how girls and women relate differently to ICT and opportunities and barriers for women in science and technology in general Current research relating to gender and ICT is often country specific and is more prevalent in developed countries than in developing countries This paper suggests where additional research is needed on barriers to women's entry and access to ICT The overall objective of this paper is to influence policy dialogue around women and ICT for development by raising awareness of the digital gender divide Economic opportunity for women in ICT will not be realized until policies address gender considerations and ensure that ICT investment contributes to more sustainable and equitable development Information and Communication Technologies for Active Ageing Marcelino Cabrera,Norbert

Malanowski,2009 The Institute for Prospective Technological Studies IPTS carries out research in the field of ageing with a focus on the role that Information and Communication Technologies ICT can play to promote Active Ageing This book attempts to reflect aspects of the contribution ICT can make to quality of life for older citizens in Europe *Information and Communication Technologies for Ageing Well and e-Health* Carsten Röcker,John O'Donoghue,Martina Ziefle,Markus Helfert,William Molloy,2017-07-18 This book constitutes the thoroughly refereed proceedings of the International Conference on Communication Technologies for Ageing Well and e Health ICT4AWE 2016 held in Rome Italy in April 2016 The 8 full papers presented were carefully reviewed and selected from 39 submissions The papers present relevant trends of current research on ageing well and e health including ambient assisted living mobile assistive technology lifestyle engineering and life quality electronic health records security and privacy in e Health smart environments home care and remote monitoring

Electronic Healthcare Information Security Charles A. Shoniregun,Kudakwashe Dube,Fredrick Mtenzi,2010-11-03 The adoption of Information and Communication Technologies ICT in healthcare is driven by the need to contain costs while maximizing quality and efficiency However ICT adoption for healthcare information management has brought far reaching effects and implications on the spirit of the Hippocratic Oath patient privacy and confidentiality A wave of security breaches have led to pressing calls for opt in and opt out provisions where patients are free to choose to or not have their healthcare information collected and recorded within healthcare information systems Such provisions have negative impact on cost efficiency and quality of patient care Thus determined efforts to gain patient trust is increasingly under consideration for enforcement through legislation standards national policy frameworks and implementation systems geared towards closing gaps in ICT security frameworks The ever increasing healthcare expenditure and pressing demand for improved quality and efficiency in patient care services are driving innovation in healthcare information management Key among the main innovations is the introduction of new healthcare practice concepts such as shared care evidence based medicine clinical practice guidelines and protocols the cradle to grave health record and clinical workflow or careflow Central to these organizational re engineering innovations is the widespread adoption of Information and Communication Technologies ICT at

national and regional levels which has ushered in computer based healthcare information management that is centred on the electronic healthcare record EHR

Handbook of Research on ICTs and Management Systems for Improving Efficiency in Healthcare and Social Care Cruz-Cunha, Maria Manuela, Miranda, Isabel Maria, Gonçalves, Patricia, 2013-04-30 Through the use of ICT tools such as the internet portals and telecommunication devices the quality of healthcare has improved in local and global health aiding in the development of a sustainable economy Handbook of Research on ICTs and Management Systems for Improving Efficiency in Healthcare and Social Care brings together a valuable research collection on ICT elements needed to improve communication and collaboration between global health institutes public and private organizations and foundations Highlighting the adoption and success factors in the development of technologies for healthcare this book is essential for IT professionals technology solution providers researchers and students interested in technology and its relationship with healthcare and social services

Information Communication Technologies: Concepts, Methodologies, Tools, and Applications Van Slyke, Craig, 2008-04-30 The rapid development of information communication technologies ICTs is having a profound impact across numerous aspects of social economic and cultural activity worldwide and keeping pace with the associated effects implications opportunities and pitfalls has been challenging to researchers in diverse realms ranging from education to competitive intelligence

Benefits and challenges to using health-related information and communication technologies among older adults Ronald W. Berkowsky, Alexander Seifert, Timothy M. Hale, 2023-07-03

Information and Communication Technologies in the Health Sector Andrés Fernández, 2010 There are notorious health inequalities in Latin America and the Caribbean A series of factors limit access to timely and quality medical care scarcity of human resources infrastructure facilities and medicine as well as low family incomes physical and cultural distance between supply provided by the public sector and the population requiring care Income levels place of residence and ethnic origins are therefore variables that shape vulnerability and exclusion of millions of households throughout the region This situation is accompanied by changes in health demand structure stemming from the fast speed of population aging and urban growth especially in intermediate cities On the other hand increasing movement of people between countries especially in border areas poses the challenge of integrated strategies for epidemiological surveillance and healthcare This situation is exacerbated by the rising cost of medical care due among other reasons to the higher cost of health related technologies medicine and equipment and more commonplace chronic diseases because of the increasing number of older people This scenario implies important challenges for the development of State policies and strategies that must include decisions regarding the incorporation of information and communication technologies ICTs The potential of these policies and strategies for reducing access limitations improving efficiency in the health sector and in the quality of care and patient safety are some of the elements that must be considered in order to decidedly face the difficulties and resistance that other sectors have already tackled Major changes and

increasing improvements for ICTs as well as the bottleneck development of bioengineering and technological convergence are changing the way we can work around the issue of health. The possible application of such technological innovation encompasses many if not all activities related to health care administration and education offering opportunities to both increase coverage and improve the quality of care as well as health system effectiveness and efficiency. The concept of electronic health e health is used herein to encompass the multiple potential applications of ICTs in this field regardless of whether they are aimed at health sector authorities organizations providing care and health professionals or used as customized systems for patients and citizens in general. This concept includes applications ranging from electronic medical records and various types of telemedicine to health portals and hospital management systems among others. This basically refers to everything that uses ICTs in order to improve health actions in the sphere of prevention diagnosis treatment monitoring and management. However limited institutional progress has been made despite several electronic health initiatives being implemented throughout the region. Consequently most of these projects have limited scope and are not properly integrated into health policies or national ICT strategies. This document starts by identifying and describing the several benefits expected as a result of incorporating ICTs in health and goes on to summarize present and future challenges for health policies especially inasmuch as the most vulnerable populations are concerned. Thirdly the document showcases global progress made in several applications strategies implemented and difficulties faced in some developed and LAC countries. The document finishes with generic proposals for the formulation of policies and strategies to be considered and adapted by countries throughout the region.

ICIME 2011-Proceedings of the 2nd International Conference on Information Management and Evaluation

Ken Grant, Following on from the continued success of the European Conference on Information Management and Evaluation we are delighted at the Ted Rogers School of Management Ryerson University to be able to host the 2nd International Conference on Information Management and Evaluation ICIME 2011. ICIME aims to bring together individuals researching and working in the broad field of information management including information technology evaluation. We hope that this year's conference will provide you with plenty of opportunities to share your expertise with colleagues from around the world. This year's opening keynote address will be delivered by Dr Catherine Middleton Ted Rogers School of Information Technology Management Ryerson University Toronto Canada. *Advances in the Application of Information and Communication Technologies in Healthcare at the Patient's Home* Valentina Isetta, Universitat de Barcelona. Facultat de Medicina, 2013. INTRODUCTION The pressure to contain health costs particularly by avoiding hospitalizations and promoting the early discharge of patients is generating a greater demand for home healthcare at a time when this resource is rapidly becoming less available. Telemedicine has been defined as the use of information and communications technologies ICT to deliver health services and transmit health information at distance for the purpose of improving patient's care and education and to facilitate communication between patients and healthcare.

professionals Most of the studies on telemedicine showed a lot of potentialities and possibilities but did not develop further in the clinical routine because of problems and difficulties involving the use of this technology Therefore it seems clear the need of simple and straightforward applications which can provide useful and widely applicable services to healthcare and as well as reliable data to assess the actual impact of telemedicine on homecare

2 GENERAL AIM To design develop validate and assess the benefit of new Information and Communication Technology ICT applications in healthcare at patient s home

3 HYPOTHESES 1 An Internet based support system for monitoring newborn patients after discharge from nursery would improve care be well accepted by parents and reduce unplanned healthcare particularly visits to the emergency department

2 The development of a specific web based tool could introduce a new strategy for the continuous positive airway pressure CPAP therapy follow up of patients with obstructive sleep apnea syndrome OSAS which could improve the CPAP compliance reduce face to face clinical visits and be more cost effective

3 A new telemedicine system for remote CPAP therapy monitoring could provide valuable and useful data about treatment compliance and efficacy for the follow up of OSAS patients

4 STUDY 1 A new Internet based monitoring tool for the neonatal home care after discharge was successfully developed This new monitoring approach resulted in a high level of parental satisfaction with the service Using a societal perspective the cost of the Internet based follow up resulted much lower than that of the conventional hospital based follow up Additionally ED visits in the first month of patients life decreased with the use of the Internet based monitoring system This telemedicine follow up strategy proved absolute dominance both more clinically effective and less costly over the standard follow up based on hospital visits This Internet based tool has been effectively transferred to the health system since it is in routine clinical use at the Hospital de Sant Pau in Barcelona www.petitsacasa.santpau.cat

5 STUDY 2 The opinion of the interviewed patients and medical staff about the helpfulness and satisfaction of the telemedicine monitoring approach indicated that the web based support tool together with the televisit are potentially useful to support the home follow up of CPAP treatment in OSAS patients The high patients compliance to the remote monitoring through the online questionnaire suggested this strategy to be helpful and practical for the long period CPAP therapy control The multicenter support system we developed represents a new telemedicine approach to CPAP therapy follow up for OSAS patients which seeks enforcing patients confidence and improving therapy adherence The developed telemedicine support system has been effectively transferred to the health system since it is in use in a multinational clinical trial currently involving 18 hospitals www.micpap.com

6 STUDY 3 The geometry of the telemonitoring device NOWAPI does not influence the CPAP treatment NOWAPI showed good compatibility with the CPAP machines and an excellent performance in estimating the duration of the CPAP treatment and in detecting residual respiratory events in simulated OSAS patients The results of this study demonstrated that NOWAPI system could be a valuable tool for telemonitoring the treatment of obstructive sleep apnea

Encyclopedia of Healthcare Information Systems Wickramasinghe, Nilmini, Geisler, Eliezer, 2008-06-30 Healthcare a vital

industry that touches most of us in our lives faces major challenges in demographics technology and finance Longer life expectancy and an aging population technological advancements that keep people younger and healthier and financial issues area constant strain on healthcare organizations resources and management Focusing on the organization s ability to improve access quality and value of care to the patient may present possible solutions to these challenges The Encyclopedia of Healthcare Information Systems provides an extensive and rich compilation of international research discussing the use adoption design and diffusion of information communication technologies ICTs in healthcare including the role of ICTs in the future of healthcare delivery access quality and value of healthcare nature and evaluation of medical technologies ethics and social implications and medical information management

Health Care Delivery and Clinical Science: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources,2017-12-01 The development of better processes to provide proper healthcare has enhanced contemporary society By implementing effective collaborative strategies this ensures proper quality and instruction for both the patient and medical practitioners Health Care Delivery and Clinical Science Concepts Methodologies Tools and Applications is a comprehensive reference source for the latest scholarly material on emerging strategies and methods for delivering optimal healthcare and examines the latest techniques and methods of clinical science Highlighting a range of pertinent topics such as medication management health literacy and patient engagement this multi volume book is ideally designed for professionals practitioners researchers academics and graduate students interested in healthcare delivery and clinical science

Virtual and Mobile Healthcare: Breakthroughs in Research and Practice Management Association, Information Resources,2019-09-06 One of the primary topics at the center of discussion and very often debate between industry professionals government officials and the general public is the current healthcare system and the potential for an overhaul of its processes and services Many organizations concerned for the long term care of patients wish to see new strategies practices and organizational tools developed to optimize healthcare systems all over the world One of the central engines of the current shift toward reorientation of healthcare services is virtual and mobile healthcare Virtual and Mobile Healthcare Breakthroughs in Research and Practice explores the trends challenges and issues related to the emergence of mobile and virtual healthcare The book also examines how mobile technologies can best be used for the benefit of both doctors and their patients Highlighting a range of topics such as smart healthcare electronic health records and m health this publication is an ideal reference source for medical professionals healthcare administrators doctors nurses practitioners and researchers in all areas of the medical field

Information Communication Technologies and Human Development: Opportunities and Challenges Gasc -Hernandez, Mila,Equiza-Lopez, Fran,Acevedo-Ruiz, Manuel,2006-11-30 Emphasizes the need to consider the geographic historic and cultural context of an information communication technology ICT for development initiative This work includes several real examples that show some of the key success factors that have to be taken into consideration when

using ICTs for development It is a tool for practitioners
