6

Gene Interaction

WORKING WITH THE FIGURES

1. In Figure 6-1:
 - a. What do the yellow stars represent?
 - b. Explain in your own words why the heterozygote is functionally wild type.

Answer:

- a. Yellow stars represent mutations in the gene.
- b. Heterozygous is a functional genotype because there is a sufficient amount of a gene product from the second (wild type) gene on the second chromosome, which does not have a mutation.

2. In Figure 6-2, explain how the mutant polypeptide acts as a spoiler and what its net effect on phenotype is.

Answer: Consider the lower-right-hand panel in this figure: In the heterozygote, the mutant protein imposes its shape on the wild-type protein resulting in nonfunction.

3. In Figure 6-6, assess the allele V^+ . Is it dominant? Recessive? Codominant? Incompletely dominant?

Answer: Allele V^+ , which produces solid white patterns in a clover leaf, appears codominant with V^{++}
