Cosmetics manufacture is a dynamic and vibrant industry with companies varying from the very small scale working in their own home to much larger enterprises. With such variable companies there is the risk of equally variable quality in manufacturing. The International Organization for Standards ISO provides guidelines on good manufacturing processes for the cosmetics industry. However, not everyone working in cosmetics has a scientific or engineering background and understanding and meeting the ISO requirements can be daunting. Whether you are a small business just starting out or an established company looking to expand, *Making Quality Cosmetics* will guide you through the requirements of the ISO standard. Calling on more than 35 years of experience in the cosmetics sector, the author covers every aspect of the manufacturing set up and process as well as discussing other regulations that may need to be considered, especially in larger facilities. With technical advice ranging from choosing equipment and raw materials to assessing and auditing contractors, this book will help you make sure your products are of the highest quality. Design for Water Heather Kinkade-Levario, 2007-06-01

A guide to alternate water collection for green new developments aimed at conserving water and reusing it wisely. In an era of dwindling resources water is poised to become the new oil as the entire world now faces the reality of a decreasing supply of clean water. To avert a devastating shortage we must not only look at alternate water sources for existing structures we must also plan our new developments differently. Design for Water is an accessible and clearly written guide to alternate water collection with a focus on rainwater harvesting in the urban environment. The book outlines the process of water collection from multiple sources: landscape residential commercial industrial school park and municipal systems. It provides numerous case studies, details the assembly and actual application of equipment, includes specific details, schematics and references. All aspects of rainwater harvesting are outlined including passive and active system set up, storage, stormwater reuse, distribution, purification, analysis and filtration. There is even a section on rainwater harvesting for wildlife. In addition to rainwater there are several affordable and accessible alternate sources including cooling tower bleed off water, air conditioning condensate, gray water and fog collection. Design for Water is geared to providing those making development decisions and guidelines with the information they need to set up passive harvesting techniques. The book will especially appeal to engineers, landscape architects, municipal decision makers, developers and land owners.
