Questions in Elementary Science and Social Studies Textbooks Bonnie B. Armbruster,1989 **Learning From**

Textbooks Bruce K. Britton,Arthur Woodward,Marilyn Binkley,2012-11-12 It is surprising that there is so little research on textbooks given their centrality to teaching and learning in elementary and secondary schools Textbooks have become a focus of political and cultural controversy advocating a multicultural curriculum that has sparked some vigorous protests Research is absent in this debate therefore questions of legitimate knowledge the role of textbooks textbook design policy selection issues and economic issues concerning the marketplace are not part of the current debate Without insights of research on considerate text mentioning illustrations and so forth the current controversy will result in publishers responding to demands for more content not less thus textbooks will become compendia of information that on the surface satisfy everyone This volume demonstrates how research on important issues relative to textbook design can advance our knowledge about what makes textbooks effective learning tools and thus inform policymakers publishers and those involved in textbook selection Representing pure and applied approaches researchers present papers on the quality of writing the role of questions the role of pictures and illustrations and the role of auxiliary materials in the design of effective textbooks The chapters provide insight into research and its application to textbook design and improvement stimulating others to follow this lead **Hmh Science Georgia** ,2018 [Critical Analysis of Science Textbooks](#) Myint Swe Khine,2013-06-26 The critical analysis of science textbooks is vital in improving teaching and learning at all levels in the subject and this volume sets out a range of academic perspectives on how that analysis should be done Each chapter focuses on an aspect of science textbook appraisal with coverage of everything from theoretical and philosophical underpinnings methodological issues and conceptual frameworks for critical analysis to practical techniques for evaluation Contributions from many of the most distinguished scholars in the field give this collection its sure footed contemporary relevance reflecting the international standards of UNESCO as well as leading research organizations such as the American Association for the Advancement of Science whose Project 2061 is an influential waypoint in developing protocols for textbook analysis Thus the book shows how to gauge aspects of textbooks such as their treatment of controversial issues graphical depictions scientific historiography vocabulary usage accuracy and readability The content also covers broader social themes such as the portrayal of women and minorities Despite newer more active pedagogies textbooks continue to have a strong presence in classrooms and to embody students socio historical inheritance in science Despite their ubiquitous presence they have received relatively little on going empirical study It is imperative that we understand how textbooks influence science learning This book presents a welcome and much needed analysis Tina A Grotzer Harvard University Cambridge Massachusetts USA The present book

provides a much needed survey of the current state of research into science textbooks and offers a widerange of perspectives to inform the science of writing better science textbooks Keith S Taber University of Cambridge Cambridge United Kingdom

that mission is basically sound in theory we instill the idea that teachers at all levels are professionals always learning and growing in knowledge that theory that philosophical underpinning does not insure that the students who complete our program are confident about the act or performance of teaching In our unique program students work closely with one teacher and classroom for the entire senior year and then are supervised and mentored during their first semester of teaching the program is heavily field based and it depends on the effectiveness of mentoring throughout the methods coursework and the first semester of full time teaching Students tell us this guidance and support is invaluable and yet we feel the disjuncture between university and school just as many of you in more traditional student teaching settings Students hear best practice information from us in methods classes and they receive ample exposure to the research supporting our field but have a hard time implementing research based practices in their classroom settings and an even harder time finding it in the classrooms around them
