Marsh, 2012-12-06 Over the past two decades theorists and researchers have given increasing attention to the effects both beneficial and harmful of various control related motivations and beliefs People's notions of how much personal control they have or desire to have over important events in their lives have been used to explain a host of performance and adaptational outcomes including motivational and performance deficits associated with learned helplessness Abramson Seligman Rodin 1986 cardiovascular disease Matthews 1982 cancer Sklar Ryckman 1979 and post abortion adjustment Mueller Jones Kelley 1967 for example have suggested that causal inferences arise from a desire to render the social world predictable and controllable Similarly control has been implicated as an important mediator of cognitive dissonance Wicklund Kiesler Collins Miller 1969 Despite the apparent centrality of control motivation to a variety of social psychological phenomena until recently there has been relatively little research explicitly concerned with the effects of control motivation on the cognitive processes underlying such phenomena cf **Encyclopedia of Mental Health**, 2015-08-26 *Encyclopedia of Mental Health* Second Edition Four Volume Set tackles the subject of mental health arguably one of the biggest issues facing modern society The book presents a comprehensive overview of the many genetic neurological social and psychological factors that affect mental health also describing the impact of mental health on the individual and society and illustrating the factors that aid positive mental health The book contains 245 peer reviewed articles written by more than 250 expert authors and provides essential material on assessment theories of personality specific disorders therapies forensic issues ethics and cross cultural and sociological aspects Both professionals and libraries will find this timely work indispensable Provides fully up to date descriptions of the neurological social genetic and psychological factors that affect the individual and society Contains more than 240 articles written by domain experts in the field Written in an accessible style using terms that an educated layperson can understand Of interest to public as well as research libraries with coverage of many important topics including marital health divorce couples therapy fathers child custody day care and day care providers extended families and family therapy *Handbook of Behavioral Group Therapy*

Dennis Upper, Steven M. Ross, 2013-11-11 In 1977 the current editors contributed a review article on behavioral group therapy to a volume of Hersen Miller and Eisler's Progress in Behavior Modification series 1977 At that time we noted that despite the advantages to both clinicians and clients of conducting behavioral treatments in groups clinical developments and research in this area were still at a relatively rudimentary level The majority of studies in the behavioral group therapy literature we reviewed reported the direct transfer of an individual behavior therapy procedure such as systematic desensitization to a group of clients with homogeneous problems such as snake phobia or test anxiety Groups were used in many studies merely to generate sufficient numbers of subjects to allow various types of interventions to be compared rather than to examine group process variables per se Only a limited amount of attention had been given to whether these group interaction variables such as group discussion sharing ideas and feelings and mutual feedback and reinforcement might enhance individually oriented procedures applied in a group The 8 years since this original chapter was written have seen a significant growth in both the breadth and depth of clinical research and work in the behavioral group therapy field This growth was documented in part in a three volume series on behavioral group therapy by the current editors Upper Ross 1979 1980 1981

Interpersonal Rejection Mark R. Leary, 2006-08-24 Interpersonal rejection ranks among the most potent and distressing events that people experience Romantic rejection ostracism stigmatization job termination and other kinds of rejections have the power to compromise the quality of people's lives As a result people are highly motivated to avoid social rejection and indeed much of human behavior appears to be designed to avoid such experiences Yet despite the widespread effects of real anticipated and even imagined rejections psychologists have devoted only passing attention to the topic and the research on rejection has been scattered throughout a number of psychological subspecialties including social clinical developmental and personality psychology This volume brings together contributors whose work is on the cutting edge of rejection research providing a readable overview of recent advances in the field In doing so it not only provides a look at the current state of the area but also helps to establish the topic of rejection as an identifiable area for future research

Adaptive Learning and the Human Condition Jeffrey C. Levy, 2015-10-30 Adaptive Learning and the Human Condition presents the basic principles of classical Pavlovian and

instrumental Skinnerian conditioning in a more coherent and expansive manner than is the case in other textbooks Learning is defined as an adaptive process through which individuals acquire the ability to predict and where possible control the environment This overarching definition enables integration of traditional Pavlovian and Skinnerian principles and terminology and makes explicit why treatment of the learning process is essentially limited to these two historical research paradigms Pavlov developed a methodology for studying animals under circumstances where they could predict but not control sequences of environmental events Skinner studied animals under circumstances where their behavior had an effect upon environmental events Observational learning and symbolic communication i e spoken or written language are incorporated as indirect learning processes through which individuals can acquire the ability to predict or control This treatment creates a perspective within which it is possible to consider the fundamental nature of the learning process in understanding the human condition and in addressing significant individual and social concerns Examples of applications and issues not included in similar textbooks include The role of classical and instrumental conditioning in language acquisition The administration of rewards and punishers in Baumrind s parental styles as related to Kohlberg s stages of moral development Stone Age hunter gatherer and technologically advanced cultures How did we get from there to here Self control and self actualization While covering traditional technical and theoretical issues the book is written in a clear engaging style The narrative builds across chapters culminating in the treatment of applications and societal concerns of import and interest to students and faculty alike Upon completing this book readers should be able to explain the significance of human condition through adaptive learning present the basic principles of classical and instrumental conditioning and understand the significance of scientific research

Women and Attempted Suicide Raymond Jack, 2024-09-30 Attempted suicide began to increase inexorably in western societies following World War II In Britain it reached epidemic proportions in 1976 when 120 000 cases were reported More accurately termed self poisoning as the majority of cases involve deliberate non fatal overdosing on pills this remarkable social medical phenomenon remains without any generally accepted explanation First published in 1992 Women and Attempted Suicide suggests that two factors have contributed to this failure the neglect of gender issues and the influence of psychiatry on explanations of deviant behaviour The book offers a new psycho social explanation based on the theory of Causal Attribution This suggests that as a result of their socialization individuals differ in the causes to which they attribute their problems and that some causal attributions are more helpful than others in coping with problems The volume argues that certain women and others such as the unemployed and underprivileged who may have limited control over their lives acquire a helpless attributional style This renders them less able to cope with adversity more likely to turn to doctors when it befalls them and more likely to be prescribed psychotropic drugs When pills fail to solve problems helplessness may turn to hopelessness and self poisoning This book will be of interest to students and researchers in many disciplines and particularly of psychology medical sociology and women studies

Health Behavior Sonya Bahar, 2013-11-11 **HEALTH BEHAVIOR AS BASIC RESEARCH** Health behavior is not a traditional discipline but a newly emerging interdisciplinary field It is still in the process of establishing its identity Few institutional or organizational structures i e departments and programs reflect it and few books and journals are directed at it The primary objective of this book is thus to identify and establish health behavior as an important area of basic research worthy of being studied in its own right As a basic research area health behavior transcends commitment to a particular behavior a specific illness or health problem or a single set of determinants One way of achieving this objective is to look at health behavior as an outcome of a range of personal and social determinants rather than as a set of risk factors or as targets for intervention strategies directed at behavioral change The

book is thus organized primarily in terms of the size of the determinants of concern rather than in terms of specific health behaviors or specific health problems or conditions. With the first part of the book establishing working definitions of health behavior and health behavior research as basic frameworks, the second part moves from smaller to larger systems informing the reader about basic research that demonstrates how health behavior is determined by personal, family, social, institutional, and cultural factors. These distinctions reflect some arbitrariness; the family, organizations, and institutions, for example, are social units.
