Chockler, Alan J. Hu, 2009-04-22 These are the conference proceedings of the 4th Haifa Verification Conference held October 27-30 2008 in Haifa Israel. This international conference is a unique venue that brings together leading researchers and practitioners of both formal and dynamic verification for both hardware and software systems. This year's conference extended the successes of the previous years with a large jump in the number of submitted papers. We received 49 total submissions with many more high quality papers than we had room to accept. Submissions came from 19 different countries reflecting the growing international visibility of the conference. Of the 49 submissions, 43 were regular papers, 2 of which were later withdrawn, and 6 were tool papers. After a rigorous review process in which each paper received at least four independent reviews from the distinguished Program Committee, we accepted 12 regular papers and 4 tool papers for presentation at the conference and inclusion in this volume. These numbers give acceptance rates of 29% for regular papers and 67% for tool papers, 34% combined, comparable to the elite much older conferences in the field. A Best Paper Award, selected on the basis of the reviews and scores from the Program Committee, was presented to Edmund Clarke, Alexandre Donz e, and Axel Legay for their paper entitled *Statistical Model Checking of Mixed Analog Circuits with an Application to a Third Order Delta Sigma Modulator*. The refereed program was complemented by an outstanding program of invited talks, panels, and special sessions from prominent leaders in the field.

Co-verification of Hardware and Software for ARM SoC Design Jason Andrews, 2004-09-04. Hardware/software co-verification is how to make sure that embedded system software works correctly with the hardware and that the hardware has been properly designed to run the software successfully before large sums are spent on prototypes or manufacturing. This is the first book to apply this verification technique to the rapidly growing field of embedded systems on a chip SoC. As traditional embedded system design evolves into single-chip design, embedded engineers must be armed with the necessary information to make educated decisions about which tools and methodology to deploy. SoC verification requires a mix of expertise from the disciplines of microprocessor and computer architecture, logic design, and simulation, and C and Assembly language, embedded software.

Until now the relevant information on how it all fits together has not been available Andrews a recognized expert provides in depth information about how co verification really works how to be successful using it and pitfalls to avoid He illustrates these concepts using concrete examples with the ARM core a technology that has the dominant market share in embedded system product design The companion CD ROM contains all source code used in the design examples a searchable e book version and useful design tools The only book on verification for systems on a chip SoC on the market Will save engineers and their companies time and money by showing them how to speed up the testing process while still avoiding costly mistakes Design examples use the ARM core the dominant technology in SoC and all the source code is included on the accompanying CD Rom so engineers can easily use it in their own designs

**Contributions to Hardware and Software Reliability** P. K. Kapur, Santosh Kumar, R. B. Garg, 1999 With better computing facilities now available there is an ever increasing need to ensure that elegant theoretical results on hardware reliability are computationally available This book discusses those aspects which have relevance to computing systems and those where numerical computation was a problem It is also well known that nearly 70% of the cost goes into software development and hence software reliability assumes special importance The book not only gives an extensive review of the literature on software reliability but also provides direction in developing models which are flexible and can be used in a variety of testing environments Besides several alternative formulations of the release time problem are discussed along with variants such as allocation of testing effort resources to different modules of the software or the testing effort control problem Software reliability has now emerged as an independent discipline and requires a strong partnership between computer scientists statisticians and operational researchers This aspect is broadly highlighted in the book

**Hardware and Software, Verification and Testing** Shmuel Ur, Eyal Bin, Yaron Wolfsthal, 2009-09-02 This book constitutes the refereed post proceedings of the First International Conference on Hardware Verification Software Testing and PADTAD held in November 2005 The conference combines the sixth IBM Verification Workshop the fourth IBM Software Testing Workshop and the third PADTAD Parallel and Distributed Systems Testing and Debugging Workshop The 14 revised full papers presented together with three invited contributions were carefully reviewed and selected from 31 submissions The papers address all current issues in hardware software verification software testing and testing of parallel and concurrent applications

**Software-Hardware Integration in Automotive Product Development** John Blyler, 2013-11-07 Software Hardware Integration in Automotive Product Development brings together a must read set of technical papers on one the most talked about subjects among industry experts The carefully selected content of this book demonstrates how leading companies universities and organizations have developed methodologies tools and technologies to integrate verify and validate hardware and software systems The automotive industry is no different with the future of its product development lying in the timely integration of these chiefly electronic and mechanical systems The integration activities cross both product type and engineering discipline boundaries

to include chip embedded board and network vehicle level systems Integration verification and validation of each of these three domains are examined in depth attesting to the difficulties of this phase of the automotive hardware and software system life cycle The current state of the art is to integrate verify validate and test automotive hardware and software with a complement of physical hardware and virtual software prototyping tools The growth of sophisticated software tools sometimes combined with hardware in the loop devices has allowed the automotive industry to meet shrinking time to market decreasing costs and increasing safety demands It is also why most of the papers in this book focus on virtual systems prototypes and models to emulate and simulate both hardware and software Further such tools and techniques are the way that hardware and software systems can be co verified and tested in a concurrent fashion The goal of this compilation of expert articles is to reveal the similarities and differences between the integration verification and validation IVV of hardware and software at the chip board and network levels This comparative study will reveal the common IVV thread among the different but ultimately related implementations of hardware and software systems In so doing it supports the larger systems engineering approach for the vertically integrated automobile namely that of model driven development

**Simulation Validation** Peter L. Knepell, Deborah C. Arangno, 1993-06-13 Helps you ensure that your simulations are appropriate representations of real world systems The book concentrates on the differentiation between the assessment of a simulation tool and the verification and validation of general software products It is a systematic procedural practical guide that you can use to enhance the credibility of your simulation models In addition it is a valuable reference book and a road map for software developers and quality assurance experts or as a text for simulation methodology and software engineering courses This book details useful assessment procedures and phases discusses ways to tailor the methodology for specific situations and objectives and provides numerous assessment aids The reader can use these aids to support ongoing assessments over the entire life cycle of the model

**System-level Test and Validation of Hardware/Software Systems** Matteo Sonza Reorda, Zebo Peng, Massimo Violante, 2006-03-30 New manufacturing technologies have made possible the integration of entire systems on a single chip This new design paradigm termed system on chip SOC together with its associated manufacturing problems represents a real challenge for designers SOC is also reshaping approaches to test and validation activities These are beginning to migrate from the traditional register transfer or gate levels of abstraction to the system level Until now test and validation have not been supported by system level design tools so designers have lacked the infrastructure to exploit all the benefits stemming from the adoption of the system level of abstraction Research efforts are already addressing this issue This monograph provides a state of the art overview of the current validation and test techniques by covering all aspects of the subject including modeling of bugs and defects stimulus generation for validation and test purposes including timing errors design for testability

*Design of Hardware/Software Embedded Systems* Eugenio Villar Bonet, 2001 Este libro presenta los desaf os planteados por las nuevas y sumamente poderosas tecnolog as de

integración de sistemas electrónicos que están en la base de los cambios sociales hacia lo que llaman la Sociedad de la Información en la que los dispositivos electrónicos se hacen una parte incorporada de la vida diaria encajados en casi cada producto. Es necesario un conocimiento cuidadoso de los desafíos para aprovechar la amplia gama de ocasiones ofrecidas por tales capacidades de integración y las correspondientes posibilidades de diseño de sistemas electrónicos.
