Halophiles Biodiversity And Sustainable Exploitation Sustainable Development And Biodiversity:

Halophiles Dinesh K Maheshwari, Meenu Saraf, 2015-09-16 The world of halophiles is quite diverse and their representatives in three domains of life i.e. archaea, bacteria and eukarya. They are found all over the small subunit rRNA based tree of life and these microorganisms are adapted to salt concentration up to saturation hence able to grow at 300g l NaCl concentration. Their metabolic diversity is high as well encompassing oxygenic and anoxygenic phototrophs, aerobic heterotrophs, denitrifiers, sulphate reducers, fermenters and methanogens. The proteins of halophiles are magnificently engineered to function in a milieu containing 2.5M salt that encodes genes represent a valuable repository and resource for reconstruction and visualizing processes of habitat selection and adaptive evolution. Search for new enzymes endowed with novel activities and enhanced stability continues to be desirable purpose for important commercial production of biotechnological significance. These poly extremophiles proved excellent source of enzymes and metabolites possessing inherent ability to function in extreme conditions of high salt, alkaline pH and facilitating catalysis for industrial application in food processing, industrial bioconversion, bioremediation etc. In fact it has just begun to realize the great potential and true extent of diversity and suitable applications if explored them judiciously. This book highlights current applications and research on halophiles to provide a timely overview. Chapters are written by expert authors from around the world and include topics of varied importance which include their role to play in enzyme production, restoration of soil fertility and plant growth, antimicrobial and biocatalytic potential, biomolecules in nanotechnology and aspects of quorum sensing. The book is divided into three sections dealing with biodiversity, biotechnology and sustainable exploitation of halophiles. This major new work represents a valuable source of information to all those scientists interested in microorganisms in general and extremophiles in particular with respect to their innovative products and applications.

Fungi in Extreme Environments: Ecological Role and Biotechnological Significance Sonia M. Tiquia-Arashiro,Martin Grube,2019-07-22

Over the last decades scientists have been intrigued by the fascinating organisms that inhabit extreme environments. These organisms, known as extremophiles, thrive in habitats which for other terrestrial life forms are intolerably hostile or even lethal. Based on such technological advances, the study of extremophiles has provided over the last few years ground-breaking discoveries that challenge the paradigms of modern biology. In the new bioeconomy, fungi in general play a very important role in addressing major global challenges, being instrumental for improved resource efficiency, making renewable substitutes for products from fossil resources, upgrading waste streams to valuable food and feed ingredients, counteracting life-style diseases and antibiotic resistance through strengthening the gut biota, making crop plants more robust to survive climate change conditions, and functioning as host organisms for production of new biological drugs. This range of new uses of fungi all stand on the shoulders of the efforts of mycologists over generations. The book is organized in five parts: I Biodiversity Ecology Genetics and Physiology of Extremophilic Fungi, II Biosynthesis of Novel Biomolecules and Extremozymes, III Bioenergy and Biofuel synthesis, and IV Wastewater and biosolids treatment and V Bioremediation.

Microbiomes of Extreme Environments Ajar Nath Yadav, Ali Asghar Rastegari, Neelam Yadav, 2021-03-21. The extreme microbiomes are those microorganisms thriving under extreme conditions where no other living being will have any chance to survive. The extreme habitats are those presenting high temperatures (thermophiles), low temperature (psychrophiles), hypersaline environments (halophiles), low and high pH (acidophiles, alkaliphiles), high pressure (piezophiles), etc. They are distributed worldwide. The extreme habitats have proved to offer a unique reservoir of genetic diversity and biological source of extremophiles. The extremophilic microbial diversity and their biotechnological potential use in agricultural and industrial applications will be a milestone for future needs. Extremophiles and their cell components therefore are expected to play an important role in the chemical, food, pharmaceutical, paper and textile industries as well as environmental biotechnology.

Microorganisms Resilience to Climate Change Piyush Pandey, Shrivardhan Dheeman, Dinesh K. Maheshwari, 2025-05-17. This book covers a wide range of topics such as role of microorganisms in the global carbon cycle, the impact of climate change on microbial communities, and the feedback mechanism between them. Microorganisms produce and consume greenhouse gases to transform essential elements such as carbon and nitrogen to form their cellular components. Microorganisms are also involved in nitrogen and phosphorus cycling, which are essential for plant growth and productivity. Thus, the role of microbial communities in agroecosystems with biogeochemical cycles is imperative for addressing the current global warming situation. Microorganisms are highly sensitive to changes in environmental conditions such as temperature, moisture, and nutrient availability. As the climate continues to change, shifts in microbial community structure and function may have significant consequences for ecosystem services such as nutrient cycling, water purification, and carbon sequestration. In this book, experts from a range of fields such as microbiology, ecology, biogeochemistry, and climate science come together to provide a holistic perspective on the role of microorganisms in climate change. This book is of reference to policymakers, educators,

researchers and students working in the field of microbiology and climate sciences **Current Trends in Microbial Biotechnology for Sustainable Agriculture** Ajar Nath Yadav, Joginder Singh, Chhatarpal Singh, Neelam Yadav, 2020-11-10
