Handbook on Decision Making Chee Peng Lim, 2010-09-07 Decision making arises when we wish to select the best possible course of action from a set of alternatives. With advancements of the digital technologies it is easy and almost instantaneous to gather a large volume of information and/or data pertaining to a problem that we want to solve. For instance, the world wide web is perhaps the primary source of information and/or data that we often turn to when we face a decision making problem. However, the information and/or data that we obtain from the real world often are complex and comprise various kinds of noise. Besides, real world information and/or data often are incomplete and ambiguous owing to uncertainties of the environments. All these make decision making a challenging task. To cope with the challenges of decision making, researchers have designed and developed a variety of decision support systems to provide assistance in human decision making processes. The main aim of this book is to provide a small collection of techniques stemmed from artificial intelligence as well as other complementary methodologies that are useful for the design and development of intelligent decision support systems. Application examples of how these intelligent decision support systems can be utilized to help tackle a variety of real world problems in different domains e.g. business management, manufacturing, transportation and food industries and biomedicine are also presented. A total of twenty chapters which can be broadly divided into two parts i.e.

Handbook of Behavioural Economics and Smart Decision-Making Morris Altman, 2017-05-26 This Handbook is a unique and original contribution of over thirty chapters on behavioural economics examining and addressing an important stream of research where the starting assumption is that decision makers are for the most part relatively smart or rational. This particular approach is in contrast to a theme running through much contemporary work where individuals' behaviour is deemed irrational, biased and error prone, often due to how people are hardwired. In the smart people approach, where errors or biases occur and when social dilemmas arise more often than not, improving the decision making environment can repair these problems without hijacking or manipulating the preferences of decision makers. This book covers a wide range of themes from micro to macro including various sub-disciplines within economics such as economic psychology, heuristics, fast and slow thinking, neuroeconomics, experiments, the capabilities approach, institutional economics, methodology, nudging, ethics and public policy.
