Magnetism and Transition Metal Complexes F. E. Mabbs, D. J. Machin, 2008-01-11 This text presents a detailed view of the calculation methods involved in the magnetic properties of transition metal complexes Starting at an elementary level it proceeds gradually through theory and calculations to offer sufficient background for original work in the field No specialized knowledge of magnetism is assumed in the introductory chapters which offer basic definitions and generalizations of magnetic behavior and briefly review both crystal field theory and perturbation theory Succeeding chapters explore calculations of the magnetic properties of cubic and axially distorted complexes Featuring the complete calculation for spin orbit coupling and magnetic field perturbations for one d configuration the text also discusses derivations and results for other configurations Other topics include the magnetism of polynuclear species in which antiferromagnetic ordering occurs over small numbers of centers Detailed calculations by the dipolar coupling approach are given and the results are applied to a number of studies from the literature

Multi Length-Scale Characterisation Duncan W. Bruce, Dermot O'Hare, Richard I. Walton, 2013-12-04 This volume examines important experimental techniques needed to characterise inorganic materials in order to elucidate their properties for practical application Addressing methods that examine the structures and properties of materials over length scales ranging from local atomic order to long range order on the meso and macro scopic scales Multi Length Scale Characterisation contains five detailed chapters Measurement of Bulk Magnetic Properties Thermal Methods Atomic Force Microscopy Gas Sorption in the Analysis of Nanoporous Solids Dynamic Light Scattering Ideal as a complementary reference work to other volumes in the series Local Structural Characterisation and Structure from Diffraction Methods or as an examination of the specific characterisation techniques in their own right Multi Length Scale Characterisation is a valuable addition to the Inorganic Materials Series

The fundamentals of molecular magnetism Владимир Луков, Игорь Щербаков, 2019-09-09 Molecular magnetism occupies a crossing point between two fields of research materials science and metal biochemistry and plays an important role in the field of molecular electronics The Fundamentals of molecular magnetism is the textbook to comprehensively address both the experimental and theoretical aspects of the relatively new field of research It introduces the basic concepts concerning magnetization and magnetic susceptibility establishes the fundamental equations of molecular magnetism and examines molecules containing a unique magnetic center including the highspinlow spin transition compounds The textbook highlights polymetallic species reviews the phenomenon of interaction between spin carriers from a theoretical point of view and includes numerous examples throughout to illustrate the topics discussed An essential part of the textbook is devoted to novel class of magneto active materials single molecular magnets SMMs
