immutable sets of transaction records represent a higher quality of evidence for internal and external auditors Blockchain technology will impact the performance of the audit engagement due to its attributes as the technology can seamlessly complement traditional auditing techniques Furthermore various fraud schemes related to financial reporting such as the recording of fictitious revenues could be avoided or at least greatly mitigated Frauds related to missing duplicated and identical invoices can also be greatly curtailed As a result the advent of blockchain will enable auditors to reduce substantive testing as inherent and control audit risks will be reduced thereby greatly improving an audit s detection risk As such the continuing use and popularity of blockchain will mean that auditors and information systems security professionals will need to deepen their knowledge of this disruptive technology If you are looking for a comprehensive study and reference source on blockchain technology look no further than *The Auditor s Guide to Blockchain Technology Architecture Use Cases Security and Assurance* This title is a must read for all security and assurance professionals and students looking to become more proficient at auditing this new and disruptive technology
