Handbook Of Logic In Computer Science Volume 2 Background Computational Structures:

Handbook of Logic in Computer Science: Volume 5. Algebraic and Logical Structures S. Abramsky, Dov M.

Gabbay, T. S. E. Maibaum, 2001-01-25 This handbook volume covers fundamental topics of semantics in logic and computation. The chapters, some monographic in length, were written following years of coordination and follow a thematic point of view. The volume brings the reader up to front line research and is indispensable to any serious worker in the areas.

Handbook of Logic in Artificial Intelligence and Logic Programming: Volume 5: Logic Programming Dov M.

Gabbay, C. J. Hogger, J. A. Robinson, 1998-01-08 The Handbook of Logic in Artificial Intelligence and Logic Programming is a multi-volume work covering all major areas of the application of logic to artificial intelligence and logic programming. The authors are chosen on an international basis and are leaders in the fields covered. Volume 5 is the last in this well-regarded series. Logic is now widely recognized as one of the foundational disciplines of computing. It has found applications in virtually all aspects of the subject from software and hardware engineering to programming languages and artificial intelligence. In response to the growing need for an in-depth survey of these applications, the Handbook of Logic in Artificial Intelligence and its companion, the Handbook of Logic in Computer Science, have been created. The Handbooks are a combination of authoritative exposition, comprehensive survey, and fundamental research exploring the underlying themes in the various areas. Some mathematical background is assumed, and much of the material will be of interest to logicians and mathematicians. Volume 5 focuses particularly on logic programming. The chapters, which in many cases are of monograph length and scope, emphasize possible unifying themes.

Handbook of Practical Logic and Automated Reasoning John Harrison, 2009-03-12 A one-stop reference self-contained with theoretical topics presented in conjunction with implementations for which code is supplied.

Foundations of Software Science and Computation Structures Mogens Nielsen, Uffe Engberg, 2003-08-01 ETAPS 2002 is the fifth instance of the European Joint Conferences on Theory and Practice of Software. ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences. This year it comprises five conferences: FOSSACS, FASE, ESOP, CC, TACAS, thirteen satellite workshops, ACL2, AGT, CMCS, COCV, DCC, INT, LDFA, SC, SFEDL, SLAP, SPIN, TPTS, and VISS, eight invited lectures, not including those that are specific to the satellite events and several tutorials. The events that comprise ETAPS address various aspects of the system development process, including specification, design, implementation, analysis, and improvement. The languages, methodologies, and tools which support these activities are all well within its scope. Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other. Many of the issues involved in software design apply to systems in general, including hardware systems, and the emphasis on software is not intended to be exclusive.

Combinators J. Roger Hindley, Jonathan P. Seldin, 2008-07-24 Combinatory logic and lambda calculus originally devised in the 1920s have since developed into linguistic tools especially useful in programming languages The authors previous book served as the main reference for introductory courses on lambda calculus for over 20 years this version is thoroughly revised and offers an account of the subject with the same authoritative exposition The grammar and basic properties of both combinatory logic and lambda calculus are discussed followed by an introduction to type theory Typed and untyped versions of the systems and their differences are covered Lambda calculus models which lie behind much of the semantics of programming languages are also explained in depth The treatment is as non technical as possible with the main ideas emphasized and illustrated by examples Many exercises are included from routine to advanced with solutions to most at the end of the book **Computer Science - CACIC 2023** Patricia Pesado, Walter Panessi, Juan Manuel Fernández, 2024-06-22

CONCUR 2002 - Concurrency Theory Lubos Brim, Petr Jancar, Mojmir Kretinsky, Antonin Kucera, 2003-08-02 This book constitutes the refereed proceedings of the 13th International Conference on Concurrency Theory CONCUR 2002 held in Brno Czech Republic in August 2002. The 32 revised full papers presented together with abstracts of seven invited contributions were carefully reviewed and selected from 101 submissions. The papers are organized in topical sections on verification and model checking logic mobility probabilistic systems models of computation and process algebra security Petri nets and bisimulation.

Algebra, Meaning, and Computation Kokichi Futatsugi, Jean-Pierre Jouannaud, José Meseguer, 2006-06-21 This volume honoring the computer science pioneer Joseph Goguen on his 65th Birthday includes 32 refereed papers by leading researchers in areas spanned by Goguen's work. The papers address a variety of topics from meaning meta logic specification and composition behavior and formal languages as well as models deduction and computation by key members of the research community in computer science and other fields connected with Joseph Goguen's work.

Logic, Language and Reasoning Hans Jürgen Ohlbach, U. Reyle, 2012-12-06 This volume is dedicated to Dov Gabbay who celebrated his 50 birthday in October 1995. Dov is one of the most outstanding and most productive researchers we have ever met. He has exerted a profound influence in major fields of logic linguistics and computer science. His contributions in the areas of logic language and reasoning are so numerous that a comprehensive survey would already fill half of this book. Instead of summarizing his work we decided to let him speak for himself. Sitting in a car on the way to Amsterdam airport he gave an interview to Jelle Gerbrandy and Anne Marie Mineur. This recorded conversation with him which is included gives a deep insight into his motivations and into his view of the world the Almighty and of course the role of logic. In addition this volume contains a partially annotated bibliography of his main papers and books. The length of the bibliography and the broadness of the topics covered there speaks for itself.

Software Engineering 2 Dines Bjørner, 2007-08-01 The art/craft discipline logic practice and science of developing large scale software products needs a professional base. The textbooks in this three volume set combine informally engineeringly sound approaches with the rigor of formal mathematics based approaches. This volume covers the basic principles and techniques of specifying systems and languages. It deals with modelling the semiotics pragmatics semantics and syntax of systems and languages modelling spatial and simple temporal phenomena and such specialized topics as modularity incl. UML class diagrams Petri nets live sequence charts statecharts and temporal logics including the duration calculus. Finally the book presents techniques for interpreter and compiler development of functional imperative modular and parallel programming languages. This book is targeted at late undergraduate to early graduate university students and researchers of programming methodologies. Vol 1 of this series is a prerequisite text.
