Grondzik,2007 The Air Conditioning Manual assists entry level engineers in the design of air conditioning systems It is also usable in conjunction with fundamental HVAC R resource material as a senior or graduate level text for a university course in HVAC system design The manual was written to fill the void between theory and practice to bridge the gap between real world design practices and the theoretical calculations and analytical procedures or on the design of components This second edition represents an update and revision of the manual It now features the use of SI units throughout updated references and the editing of many illustrations Helps engineers quickly come up with a design solution to a required air conditioning system Includes issues from comfort to cooling load calculations New sections on Green HVAC systems deal with hot topic of sustainable buildings **ASHRAE Pocket Guide for Air Conditioning, Heating, Ventilation, Refrigeration** American Society of Heating, Refrigerating and Air-Conditioning Engineers,1997 **Evaporative Air Conditioning Handbook** John Watt,2011-10-01 Air conditioning boosts man s efficiency no less than his comfort Air conditioned homes offices and factories unmistakably raise human productivity and reduce absenteeism turnover mistakes accidents and grievances especially in summer Accordingly many employers every year cool workrooms and offices to raise summer profits Employees in turn find cool homes enhancing not

only comfort and prestige but also personal efficiency and income With such economic impetus low cost summer cooling must irresistibly spread to all kinds of occupied buildings Refrigeration provides our best cooling serving well where people are closely spaced in well constructed shaded and insulated structures However its first and operating costs bar it from our hottest commercial industrial and residential buildings Fortunately evaporative cooling is an economical substitute in many regions First used in Southwest homes and businesses and in textile mills it soon invaded other fields and climates In 1946 six firms produced 200 000 evaporative coolers in 1958 25 firms produced 1 250 000 despite the phenomenal sale of refrigerating window air conditioners Though clearly secondary to refrigeration evaporative cooling is 60 to 80 percent is economical for moderate income groups and cheaper to buy and operate Thus it climates where summers are short Moreover it cheaply cools hot thinly constructed mills factories workshops foundries powerhouses farm buildings canneries etc where refrigerated cooling is prohibitively expensive *Pocket guide for air-conditioning, heating, ventilation, refrigeration; (SI edition)*.
