Jacket New Perspectives on Mind-Wandering Nadia Dario, Luca Tateo, 2022-10-07 In the last decade, a great variety and volume of scholarly work has appeared on mind wandering, a mental process involving a vast range of human life connected with first-person perspective and personhood, submental thinking, mental autonomy, etc. While different and emerging features flow into and out of one another, second-field mental travel, visual imagery, inner speech, unspecific memory, autobiographical memory, fantasies, introspection, etc., and negative and positive approaches seem to describe mind wandering. We offer an interdisciplinary theoretical and empirically informed and informative overview on mind wandering studies and methodologies oriented toward the educational field. The aim is to transform and enrich the debate on mind wandering but also to show how theoretical arguments and research findings could inform the teaching-learning context. This groundbreaking book moves along three representations of developed scientific knowledge: imaginary lines, circles, and spirals. The first section, *The Lines*, develops new lines of inquiry on attention, selective and sustained, and mind wandering, the influence of age, and mind wandering, embodiment, consciousness, and experience, and mind wandering. In the second section, *The Circles*, groups of Chapters on the same topic: methodology, tasks, and measurement, intervention, auditory beat stimulation, and mindfulness practices, and creativity, recreate a dance of interacting parts in which there are always profitable, decisive, and retroactive exchanges between the information that each group or author activates. The last section, *The Spirals*, critically discusses the absence of a unified theoretical perspective in the pedagogical field, attentive both to the processes of emergence and the interactions between parts.
