Magerl, 2013-03-09 long to understand that the phenomena associated with the redistribution of interstitial atoms and structural vacancies in non stoichiometric compounds represent an excellent model of analogous phenomena arising in solid state systems with mutual substitution of components Therefore methods of analysis and description proposed and developed for nonstoichiometric compounds are applicable to a number of systems with substitutional disorder In 1980 when we embarked on this work ordering in nonstoichiometric compounds was assumed to be a rare and accidental effect which hardly deserved close attention Now many people understand that ordering represents a general regular phenomenon in all non stoichiometric compounds Ordering effects which were not even mentioned or were referred to as something insignificant and negligible just 20 years ago proved to be numerous and comparable in magnitude with the change of

properties in the whole homogeneity interval of non stoichiometric compounds Phase diagrams of binary systems of transition metals with carbon and nitrogen which remained unchanged from the time they were plotted in 1950 60s and containing one or two nonstoichiometric compounds were enriched with many ordered phases Unfortunately the accumulated experimental and theoretical knowledge has not so far been disseminated widely *Materials Handbook* François Cardarelli, 2008-03-19 This unique and practical book provides quick and easy access to data on the physical and chemical properties of all classes of materials The second edition has been much expanded to include whole new families of materials while many of the existing families are broadened and refined with new material and up to date information Particular emphasis is placed on the properties of common industrial materials in each class Detailed appendices provide additional information and careful indexing and a tabular format make the data quickly accessible This book is an essential tool for any practitioner or academic working in materials or in engineering *Integrated Computer Technologies in Mechanical Engineering - 2023* Mykola Nechyporuk, Volodymir Pavlikov, Dmytro Krytskyi, 2024-06-04 The International Scientific and Technical Conference Integrated Computer Technologies in Mechanical Engineering Synergetic Engineering ICTM was established by National Aerospace University Kharkiv Aviation Institute The Conference ICTM 2023 was held in Kharkiv Ukraine during December 2023 During this conference technical exchanges between the research community were carried out in the forms of keynote speeches panel discussions as well as special session In addition participants were treated to a series of receptions which forge collaborations among fellow researchers ICTM 2023 received 202 papers submissions from different countries All of these offer us plenty of valuable information and would be of great benefit to the experience exchange among scientists in modeling and simulation The organizers of ICTM 2023 made great efforts to ensure the success of this conference We hereby would like to thank all the members of ICTM 2023 Advisory Committee for their guidance and advice the members of program committee and organizing committee and the referees for their effort in reviewing and soliciting the papers and all authors for their contribution to the formation of a common intellectual environment for solving relevant scientific problems Also we grateful to Springer Janusz Kacprzyk and Thomas Ditzinger as the editor responsible for the series Lecture Notes in Networks and Systems for their great support in publishing these selected papers *Advances in Science and Technology of Mn+1AX_n Phases* I M Low, 2012-10-26 *Advances in Science and Technology of Mn 1AX_n Phases* presents a comprehensive review of synthesis microstructures properties ab initio calculations and applications of Mn 1AX_n phases and targets the continuing research of advanced materials and ceramics An overview of the current status future directions challenges and opportunities of Mn 1AX_n phases that exhibit some of the best attributes of metals and ceramics is included Students of materials science and engineering at postgraduate level will value this book as a reference source at an international level for both teaching and research in materials science and engineering In addition to students the principal audiences of this book are ceramic researchers materials scientists and engineers materials physicists and chemists The book

Polarity-Dependent Removal Interferences in Sink EDM of Titanium Alloys Maximilian Holsten, 2018-12-31 In the design of turbomachinery components a significant effort is carried out regarding the optimization of efficiency The increase in thermal efficiency particularly involves the introduction of high performance alloys Such alloys are for example titanium alloys Sink electrical discharge machining sink EDM is a crucial manufacturing process for components due to its independence of machined material strengths however new materials require process design Hence research to understand and optimize the machining of titanium alloys is of great benefit to the industry in general A positive tool polarity is generally adopted in sink EDM to maximize material removal relative to tool wear Sink EDM of titanium alloys as Ti6Al4V is however atypical in that these materials necessitate a negative tool polarity Adding to the intrigue are gamma titanium aluminides TiAl which machine better under the conventional positive polarity Established explanatory models of sink EDM fail in resolving the removal behavior a need for fundamental research is given This thesis focuses on clarifying the phenomena behind this interesting behavior by investigating removal mechanisms over a range of relevant process conditions The polarity effect is demonstrated to arise from the polarity dependent nature and extent of titanium carbide TiC formation on the workpiece surface which significantly affects material removal mechanisms An explanatory model deduced from different experimental and numerical approaches clarifies the influence of polarity to the formation mechanism of a TiC layer With regard to monitoring of adverse layer formations the measurement of acoustic emission AE is proven an appropriate concept A correlation of the AE signal to process forces is even established which may be crucial to determine the deflection of thin electrodes in EDM Finally the knowledge acquired is applied and enhanced in comprehensive process design that also involves the machining of additively manufactured TiAl The study reveals the beneficial behavior of the fine microstructure relative to the resulting surface integrity As a result this thesis delivers a model based concept for process design with respect to the adequate choice of tool polarity during machining of titanium alloys **Stability Loss and Buckling**

Delamination Surkay Akbarov, 2012-08-14 This book investigates stability loss problems of the viscoelastic composite materials and structural members within the framework of the Three Dimensional Linearized Theory of Stability TDLTS The stability loss problems are considered the development of the initial infinitesimal imperfection in the structure of the material or of the structural members This development is studied within the framework of the Three Dimensional Geometrical Non Linear Theory of the Deformable Solid Body Mechanics The solution to the corresponding boundary value problems is presented in the series form in the small parameter which characterizes the degree of the initial imperfection In this way the nonlinear problems for the domains bounded by noncanonical surfaces are reduced for the same nonlinear problem for the corresponding domains bounded by canonical surfaces and the series subsequent linearized problems It is proven that the

equations and relations of these linearized problems coincide with the corresponding ones of the well known TDLTS Under concrete investigations as stability loss criterion the case is taken for the initial infinitesimal imperfection that starts to increase indefinitely Moreover it is proven that the critical parameters can be determined by the use of only the zeroth and first approximations
