Intermediate Public Economics, second edition Jean Hindriks, Gareth D. Myles, 2013-04-05 A new edition of a comprehensive text updated throughout with new material on behavioral economics international taxation cost benefit analysis and the economics of climate policy Public economics studies how government taxing and spending activities affect the economy economic efficiency and the distribution of income and wealth This comprehensive text on public economics covers the core topics of market failure and taxation as well as recent developments in both policy and the academic literature It is unique not only in its broad scope but in its balance between public finance and public choice and its combination of theory and relevant empirical evidence The book covers the theory and methodology of public economics presents a historical and theoretical overview of the public sector and discusses such topics as departures from efficiency including imperfect competition and asymmetric information issues in political economy equity taxation fiscal federalism and tax competition among independent jurisdictions Suggestions for further reading from classic papers to recent research appear in each chapter as do exercises The mathematics has been kept to a minimum without sacrificing intellectual rigor the book remains analytical rather than discursive This second edition has been thoroughly updated throughout It offers new chapters on behavioral economics limits to redistribution international taxation cost benefit analysis and the economics of climate policy Additional exercises have been added and many sections revised in response to advice from readers of the first edition *American Book Publishing Record*, 2005 **Special Features of the UN Model Convention** Anna

Binder, Viktoria Wöhrer, 2019-10-01 Detailed research on the UN Model Convention s unique features The UN Model Convention has a significant influence on international tax treaty practice and is especially used by emerging and developing countries as a starting point for treaty negotiations Driven by the aim to achieve consistency in the international tax treaty practice the structure and content is to a large extent similar in the UN Model and the OECD Model However whereas the OECD has historically focused its efforts on issues mainly relevant for developed countries the UN Tax Committee has continuously attempted to specifically take into account tax treaty policies for developing countries when drafting and

amending the UN Model Convention Compared to the OECD Model Convention the UN Model Convention aims at giving more weight to the source principle Popular examples are the PE definition in the UN Model which provides for a lower threshold than Article 5 of the OECD Model or Article 12A on Fees for Technical Services which has been introduced with the latest amendment of the UN Model Convention 2017 and allows for a withholding tax to be levied on payments to non residents when the payer of the fee is a resident of that contracting State irrespective of where the services are provided Interestingly in the discussions of the tax challenges arising from the digitalization of the economy the OECD and the G20 are also exploring options to allocate more taxing rights to the jurisdiction of the customer and or user i e the market jurisdictions As this has traditionally been the focus of the UN Model Convention its unique features and developing countries practices could be taken into account when exploring new nexus rules that are not constrained by the physical presence requirement This book contains the master s theses of the full time LL M program 2018 2019 for which Special Features of the UN Model Convention has been chosen as the general topic With this book the authors and editors do not aim at discussing each article of the UN Model Convention but rather focus on the unique features of the UN Model Convention which are explored in detail This is supplemented with an evaluation of the function and relevance of the UN Tax Committee in the international tax policy discussion and with an analysis of the influences of the OECD s BEPS project on the UN Model
