Experiencing the Impossible Gustav Kuhn,2019-03-12 This thought provoking tour through the science of magic will make you question what you know about your brain and your reality A psychologist and magician shows how the scientific study of magic reveals intriguing and often unsettling insights into the mysteries of the human mind What do we see when we watch a magician pull a rabbit out of a hat or read a person s mind We are captivated by an illusion we applaud the fact that we have been fooled Why do we enjoy experiencing what seems clearly impossible or at least beyond our powers of explanation In Experiencing the Impossible Gustav Kuhn examines the psychological processes that underpin our experience of magic Kuhn a psychologist and a magician reveals the intriguing and often unsettling insights into the human mind that the scientific study of magic provides Magic Kuhn explains creates a cognitive conflict between what we believe to be true for example a rabbit could not be in that hat and what we experience a rabbit has just come out of that hat Drawing on the latest psychological neurological and philosophical research he suggests that misdirection is at the heart of all magic tricks and he offers a scientific theory of misdirection He explores among other topics our propensity for magical thinking the malleability of our perceptual experiences forgetting and misremembering free will and mind control and how magic is applied outside entertainment the use of illusion in human computer interaction politics warfare and elsewhere We may be surprised to learn how little of the world we actually perceive how little we can trust what we see and remember and how little we are in charge of our thoughts and actions Exploring magic Kuhn illuminates the complex and almost magical mechanisms underlying our daily activities

The Psychology of Magic and the Magic of Psychology Amir Raz,Jay A. Olson,Gustav Kuhn,2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and

the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception [The Handbook of Attention](#) Jonathan Fawcett,Evan Risko,Alan Kingstone,2015-11-27 An authoritative overview of current research on human attention emphasizing the relation between cognitive phenomena observed in the laboratory and in the real world Laboratory research on human attention has often been conducted under conditions that bear little resemblance to the complexity of our everyday

lives Although this research has yielded interesting discoveries few scholars have truly connected these findings to natural experiences This book bridges the gap between laboratory and life by bringing together cutting edge research using traditional methodologies with research that focuses on attention in everyday contexts It offers definitive reviews by both established and rising research stars on foundational topics such as visual attention and cognitive control underrepresented domains such as auditory and temporal attention and emerging areas of investigation such as mind wandering and embodied attention The contributors discuss a range of approaches and methodologies including psychophysics mental chronometry stationary and mobile eye tracking and electrophysiological and functional brain imaging Chapters on everyday attention consider such diverse activities as driving shopping reading multitasking and playing videogames All chapters present their topics in the same overall format historical context current research the possible integration of laboratory and real world approaches future directions and key and outstanding issues Contributors Richard A Abrams Lewis Baker Daphne Bavelier Virginia Best Adam B Blake Paul W Burgess Alan D Castel Karen Collins Mike J Dixon Sidney K D Mello Julia F cker Charles L Folk Tom Foulsham Jonathan A Fugelsang Bradley S Gibson Matthias S Gobel Davood G Gozli Arthur C Graesser Peter A Hancock Kevin A Harrigan Simone G Heideman Cristy Ho Roxane J Itier Gustav Kuhn Michael F Land Mallorie Leinenger Daniel Levin Steven J Luck Gerald Matthews Daniel Memmert Stephen Monsell Meeneley Nazarian Anna C Nobre Andrew M Olney Kerri Pickel Jay Pratt Keith Rayner Daniel C Richardson Evan F Risko Barbara Shinn Cunningham Vivian Siu Jonathan Smallwood Charles Spence David Strayer Pedro Sztybel Benjamin W Tatler Eric T Taylor Jeff Templeton Robert Teszka Michel Wedel Blaire J Weidler Lisa Wojtowicz Jeremy M Wolfe Geoffrey F Woodman **Brain and Art** Idan Segev, Luis M. Review, 1929 Blackstone's Secrets of Magic Harry Blackstone, 1929 **Magic Trick Principles** Ambrose

Delaney, AI, 2025-03-31 *Magic Trick Principles* unveils the secrets behind captivating illusions exploring the art and science that make magic so compelling It delves into why we're easily deceived and the pleasure we derive from it revealing how magicians exploit cognitive biases and manipulate our attention The book highlights that magic isn't supernatural but a blend of psychological manipulation and precise engineering where understanding perception is key The book progresses from fundamental psychological concepts to in-depth examinations of misdirection techniques like verbal cues and body language It also analyzes the mechanics of classic illusions such as Pepper's ghost demonstrating how they exploit optical principles By understanding the psychology of magic one can also understand that even the most complex illusions rely on simple engineering This unique approach combines scientific rigor with artistic appreciation providing insights applicable beyond entertainment The book uses psychology history and engineering to explain how magic works and why we are so easily amazed The principles discussed have real world applications in fields like marketing design and law enforcement making it a valuable resource for a broad audience **Showmanship for Magicians** Dariel Fitzkee, 2020-09-27

Showmanship for Magicians is a 1943 work by semi-professional magician and author Dariel Fitzkee It is the first in the Fitzkee Trilogy a classic collection that is still read widely by magicians conjuroprs and illusionists alike There is little information available on the life of Dariel Fitzkee outside of his written work Born in Annawan Illinois in 1898 as Dariel Comp Fitzkee he later changed his surname to Fitzroy during World War II But he continued to write under the name Fitzkee throughout his life Fitzkee's early books were shorter works focused on specific magic tricks Books like *Cut and Restored Rope* and *Manipulation* 1929 and *Linking Ring Manipulation* 1930 described multiple variations of these classic tricks Fitzkee was also a regular contributor to *Genii Magazine* which is still published today He wrote two recurring magic columns in the 1930s called *Thoughts are Things* and *Glimpses of Strange Shadows* Fitzkee also contributed a book and magazine review column called *Paper and Ink* that ran for over 12 years For all of his analysis and study on the subject it seems that success as a professional magician eluded him Fitzkee is said to have had an unsuccessful touring act from 1939 to 1940 after which he stopped performing But his most enduring written works were yet to come in the form of the Fitzkee Trilogy starting with *Showmanship for Magicians* Many magicians throughout the second half of the 20th century have considered it to be a cornerstone work in the field including the actor Steve Martin who was fanatical about magic as a young man He described the book as more important to me than *The Catcher in the Rye* Fitzkee was frustrated with the quality of magic at the time of

his writing He felt that the mediocrity that dominated the stages did damage to the reputation of the entire field of magic One of his biggest issues with magic in the 1940s was that its performers were still treating the trappings of the late 1800s as the standard for magic Performers often dressed in out of date tuxedos wearing top hats or turbans They adorned the stage with old fashioned round Magician s tables that had been popularized some 70 years before Fitzkee felt that magic should be geared and attuned to the times to keep it fresh and interesting for the audience Fitzkee analyzes the components of other successful forms of entertainment like film sporting events theater opera and more He breaks these down into a list of 39 Audience Appeals music color comedy conflict etc that can then be incorporated into a magic performance The second book in the Fitzkee Trilogy is The Trick Brain published in 1944 This work condenses all magic tricks into 19 basic effects such as getting a solid item to penetrate another without damaging either It also examines how to combine effects into new and updated tricks The final book of the trilogy Magic by Misdirection 1945 concerns the psychology of deception or the attack the magician makes upon the spectator s mind The books were written in this order on purpose Fitzkee felt that entertainment was the primary purpose of a magician Whatever else an audience may expect the first thing they expect is to be entertained Then he gets into the mechanics of magic in The Trick Brain helping the entertainer to hone his or her skill and create original tricks And finally in Magic by Misdirection Fitzkee examines the mental aspects of magic from both the magician and the spectator s point of view
