distinct and success determining phase of the drug discovery process Over recent years there have been major advances in the understanding of what constitutes a good lead compound and how to improve the chances of finding such a compound Written by leading scientists and established opinion leaders from industry and academia this book provides an authoritative overview of the field as well as the theory practice and scope of the principal Lead Generation Approaches in Drug Discovery including The evolution of the lead discovery process key concepts current challenges and future directions Strategies and technologies driving the high throughput screening HTS approach to lead discovery including the shifting paradigms in the design of compound collections and best practice in the hit confirmation process Knowledge based in silico or virtual screening Theory and practice of the fragment based approach to lead discovery The opportunities and challenges presented by multi target drug discovery MTDD De novo design of lead compounds and new approaches to estimating the synthetic accessibility of de novo designed molecules The impact of natural products on drug discovery and potential of natural product like compounds for exploring regions of biologically relevant chemical space Using early screening of hits and leads for metabolic pharmacokinetic and toxicological liabilities to reduce attrition during the later phases of drug discovery The utility of parallel synthesis and purification in lead discovery With each topic supported by numerous case studies this is indispensable reading for researchers in industry and academia who wish to keep up to date with the latest strategies and approaches in drug discovery

*G Protein-Coupled Receptors in Drug Discovery* Wayne R. Leifert, 2009-06-09 The G protein coupled receptors GPCRs and associated peripheral G proteins underpin a multitude of physiological processes The GPCRs represent one of the largest superfamilies in the human genome and are a significant target for bioactive and drug discovery programs It is estimated that greater than 50% of all drugs including those in development currently target GPCRs Many of the characterized GPCRs have known ligands however approximately 20% of GPCRs are described as orphan GPCRs apparent GPCRs that share the generic high level structure characteristic of GPCRs but whose endogenous ligand is not known Therefore it is expected that the field of GPCR drug discovery and development will greatly expand in the coming years with emphasis on new generations of drugs against GPCRs with unique therapeutic uses which may include drug classes such as allosteric regulators inverse agonists and identification of orphan GPCR ligands As we learn more about the molecular signaling cascades following GPCR activation we acquire a better appreciation of the complexity of cell signaling and as a result also acquire a vast array of new molecular methods to investigate these and other processes The general aim of this book is to provide researchers with a range of protocols that may be useful in their GPCR drug discovery programs It is also the basis for the development of future assays in this field Therefore the range of topics covered and the appropriate methodological approaches in GPCR drug discovery are reflected in this book

It is interesting to note that future directions in drug discovery will require input and collaboration from a plethora of fields of research As such this book will likely be of interest to scientists involved in such fields as molecular biology pharmacology

biochemistry cellular signaling and bio nanotechnology
