

Grade 11 University Biology – Unit 1 Diversity of Life
Eukaryotic Evolution and Diversity
Section 2.3 (Pages 67-71)

The fossil record indicates that simple unicellular organisms – prokaryotes – were present on Earth as early as 3.5 billion years ago (BYA).

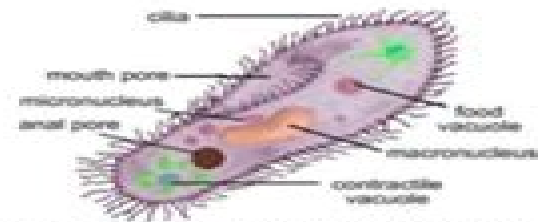

Recall

Prokaryotes

- Small and simple
- Lacking many internal structures such as membrane-bound organelles
- Mostly bacteria
- Have an outer layer called the cell membrane
- Inside is a watery fluid (... cytoplasm...) which is about 70% water plus 30% proteins (...enzymes...) and smaller molecules like amino acids, glucose molecules and ATP.
- Contains simple genetic DNA
- May occur as colonials or aggregate forms
- Some can photosynthesis, others extract energy from the environment directly
- Divide cells by binary fission
- Reproduce by conjugation

Via prokaryote life, Earth conditions changed (e.g., photosynthetic prokaryotes gave off oxygen that slowly altered Earth's atmosphere).

About 2 BYA, Eukaryotes appeared. Eukaryotes are more complex and larger. They also contain membrane-bound organelles such as mitochondria and Golgi bodies that perform specific tasks inside the cell. However, the first Eukaryotes were simple and unicellular protists (...all processes of life are completed within one cell, although protists can occur in a wide variety of structural, locomotive and nutritional patterns).

About 1.5 BYA, multicellular Eukaryotes formed.

It is believed that protists are the ancestral organisms for all multicellular life (i.e., plants, animals, fungi).

- Fungi and animals appeared 545 million years ago (MYA) from a common colonial protistan ancestor similar to a flagellated eukaryote. Simple invertebrates (e.g., sponges) appeared first, while more complex forms (e.g., fish, amphibians, reptiles, birds, mammals) appeared later.
- Plants appeared 450 MYA from a common protistan ancestor similar to green algae

Thus, the theoretical order of evolution is --

Simple prokaryotes → Simple unicellular eukaryotes → Multicellular eukaryotes

Question

How is it possible that a simple prokaryote with no internal membrane-bound organelles can become a more complex eukaryote with multiple membrane-bound organelles with specific functions?

- Working in small groups and using the materials, develop your ideas (hypothesis) to explain the development
- Present your ideas to the class
