Risk Measures and Insurance Solvency Benchmarks Vsevolod K. Malinovskii, 2021-07-21 Risk Measures and Insurance Solvency Benchmarks

Fixed Probability Levels in Renewal Risk Models is written for academics and practitioners who are concerned about potential weaknesses of the Solvency II regulatory system. It is also intended for readers who are interested in pure and applied probability, have a taste for classical and asymptotic analysis, and are motivated to delve into rather intensive calculations. The formal prerequisite for this book is a good background in analysis. The desired prerequisite is some degree of probability training, but someone with knowledge of the classical real variable theory, including asymptotic methods, will also find this book interesting. For those who find the proofs too complicated, it may be reassuring that most results in this book are formulated in rather elementary terms. This book can also be used as reading material for basic courses in risk measures, insurance mathematics, and applied probability. The material of this book was partly used by the author for his courses in several universities in Moscow, Copenhagen University, and in the University of Montreal. Features: Requires only minimal mathematical prerequisites in analysis and probability. Suitable for researchers and postgraduate students in related fields. Could be used as a supplement to courses in risk measures, insurance mathematics, and applied probability.

The Method of Response Function in Psychology & Sociology Irina G. Malkina-Pykh, Y. A. Pykh, 2013. Social psychological and sociological systems present considerable difficulties for modellers due to their complexity, multidimensionality, uncertainty, and irreducibility. The book proposes that response functions (MRF) be used as a method of constructing purposeful, credible, and integrated social systems models from data and prior knowledge or information. A semi-empirical or grey box MRF model may be regarded as a trade-off between a knowledge-based model and a black box empirical model. It may embody all the existing knowledge on the process or a part thereof, and in addition, it relies on parameterised functions whose parameters are determined from measurements. Observations contain hidden information on the processes under consideration, and one of the main purposes of the proposed method is to extract and describe these hidden relationships. Parameterisation offers ways to couple qualitative with quantitative analysis. This combination makes it possible to take into account all the phenomena that are not modelled with the required accuracy through prior knowledge. Although only a simplified picture of the processes is modelled, a grey box system model provides some insight into the system processes. These processes are featured by chains of causality, highlighting stressors and variables responsive to stressors. The method of response functions is a nonlinear regression method that implies credible models in the sense that they are identifiable and hopefully explain system output behaviour satisfactorily. For case studies, the authors have selected the problems usually studied by psychologists and sociologists with statistical procedures such as investigation of variance and discriminant analysis based on the general linear model or one of its multivariate generalisations, structural equation models, etc. Disordered eating and obesity, subjective well-being, and alexithymia. An accompanying CD-ROM contains the demonstration versions of three models that are discussed in the various chapters. The Method of Response Functions in Psychology and Sociology is aimed at Mathematical Psychologists, Mathematical Sociologists, Applied Psychologists, Sociologists, and Social Practitioners.
