Sinha, 2014-08-14 The VETOMAC X Conference covered a holistic plethora of relevant topics in vibration and engineering technology including condition monitoring machinery and structural dynamics rotor dynamics experimental techniques finite element model updating industrial case studies vibration control and energy harvesting and signal processing These proceedings contain not only all of the nearly one hundred peer reviewed presentations from authors representing more than twenty countries but also include six invited lectures from renowned experts Professor K Gupta Mr W Hahn Professor A W Lees Professor John Mottershead Professor J S Rao and Dr P Russhard This work is of interest to researchers and practitioners alike and is an essential book for most of libraries of higher academic institutes Methods for Reliability Improvement and Risk Reduction Michael Todinov, 2018-10-16 Reliability is one of the most important attributes for the products and processes of any company or organization This important work provides a powerful framework of domain independent reliability improvement and risk reducing methods which can greatly lower risk in any area of human activity It reviews existing methods for risk reduction that can be classified as domain independent and introduces the following new domain independent reliability improvement and risk reduction methods Separation Stochastic separation Introducing deliberate weaknesses Segmentation Self reinforcement Inversion Reducing the rate of accumulation of damage Permutation Substitution Limiting the space and time exposure Comparative reliability models The domain independent methods for reliability improvement and risk reduction do not depend on the availability of past failure data domain specific expertise or knowledge of the failure mechanisms underlying the failure modes Through numerous examples and case studies this invaluable guide shows that many of the new domain independent methods improve reliability at no extra cost or at a low cost Using the proven methods in this book any company and organisation can greatly enhance the reliability of its products and operations Visualization Techniques in Tribology Taisuke Maruyama, Satoru Maegawa, Hikaru Okubo, Thomas Reddyhoff, Sorin-Cristian Vladescu, Florian Michael Becker-Dombrowsky, 2025-03-28 Seeing is believing is a phrase that conveys the idea that people tend to believe something more strongly and confidently when they can actually see it with their own eyes It suggests that visual evidence or firsthand experience holds a significant level of conviction and trustworthiness often surpassing what is merely heard or described The phrase implies that when you witness something directly you are more likely to accept its reality or truthfulness compared to when you rely solely on descriptions or explanations In short the act of seeing something with your own eyes can be a powerful way to persuade and convince yourself or others of its existence or validity For this reason techniques to visualize phenomena that are normally invisible are very effective in elucidating phenomena and are utilized in a variety of academic fields Of course various visualization techniques are also used in tribology to contribute to the better understanding of complex phenomena Tribology is a

scientific and engineering discipline that studies friction wear and lubrication of surfaces in relative motion Tribology plays an important role in understanding and optimizing the performance durability and efficiency of mechanical systems and components from small scale equipment to large scale industrial machinery That is tribology aims to investigate the complex interactions between materials under various conditions and to minimize friction and wear through the use of lubricants coatings and surface treatments However since tribology deals with severe contact conditions that result in thin film thicknesse nm order and high contact pressure GPa order the development of visualization techniques is very important to elucidate the phenomena Moreover visualization of actual complex phenomena not only verifies existing theories but also provides opportunities for new discoveries and hints for the construction of new theories that emerge from such discoveries

Krieger, Gerald Eichler, Christian Erfurth, Günter prognosis Fahrnberger, 2021-05-19 This book constitutes the refereed proceedings of the 21st International Conference on Innovations for Community Services I4CS 2021 held in Bamberg Germany in May 2021 as a hybrid event The 14 full papers and 2 short papers presented in this volume were carefully reviewed and selected from 43 submissions. One short invited paper is also

included The papers focus on topics such as services for critical infrastructure network architecture for communities applications and services supporting work and life community data and visualization technology empowers industry processes and future community support **Rotor Systems** Rajiv Tiwari, 2017-11-22 The purpose of this book is to give a basic understanding of rotor dynamics phenomena with the help of simple rotor models and subsequently the modern analysis methods for real life rotor systems This background will be helpful in the identification of rotor bearing system parameters and its use in futuristic model based condition monitoring and fault diagnostics and prognostics The book starts with introductory material for finite element methods and moves to linear and non linear vibrations continuous systems vibration measurement techniques signal processing and error analysis general identification techniques in engineering systems and MATLAB analysis of simple rotors Key Features Covers both transfer matrix methods TMM and finite element methods FEM Discusses transverse and torsional vibrations Includes worked examples with simplicity of mathematical background and a modern numerical method approach Explores the concepts of instability analysis and dynamic balancing Provides a basic understanding of rotor dynamics phenomena with the help of simple rotor models including modern analysis methods for real life rotor systems Performance of DFIG and PMSG Wind Turbines Kenneth Okedu, 2023-04-05 Due to environmental pollution and climate change the use of renewable energy sources as an alternative means of power generation is on the rise globally This is because of their clean nature which makes them ecofriendly with little or no pollution compared to the traditional fossil fuel power generation power plants Among the various renewable energy sources wind energy is one of the most widely employed due to its promising technology Wind turbine technologies could be classified into two groups as follows Fixed Speed Wind Turbines FSWTs and Variable Speed Wind Turbines VSWTs There have been tremendous improvements in wind turbine technology over the years from FSWTs to VSWTs as a result of fast innovations and advanced developments in power electronics Thus the VSWTs have better wind energy capture and conversion efficiencies less acoustic noise and mechanical stress and better power quality in power grids without support from external reactive power compensators due to the stochastic nature of wind energy The two most widely employed VSWTs in wind farm development are the Doubly Fed Induction Generator DFIG and the Permanent Magnet Synchronous Generator PMSG wind turbines In order to solve transient stability intricacies during power grid faults this book proposes different control strategies for the DFIG and PMSG wind turbines
