Dialogues in Music Therapy and Music Neuroscience: Collaborative Understanding Driving Clinical Advances Julian O'Kelly, Jörg C. Fachner, Mari Tervaniemi, 2017-06-30 Music is a complex dynamic stimulus with an unparalleled ability to stimulate a global network of neural activity involved in attention emotion memory communication motor coordination and cognition As such it provides neuroscience with a highly effective tool to develop our understanding of brain function connectivity and plasticity Increasingly sophisticated neuroimaging technologies have enabled the expanding field of music neuroscience to reveal how musical experience perception and cognition may support neuroplasticity with important implications for the rehabilitation and assessment of those with acquired brain injuries and neurodegenerative conditions Other studies have indicated the potential for music to support arousal attention and emotional regulation suggesting therapeutic applications for conditions including ADHD PTSD autism learning disorders and mood disorders In common with neuroscience the music therapy profession has advanced significantly in the past 20 years Various interventions designed to address functional deficits and health care needs have been developed alongside standardised behavioural assessments Historically music therapy has drawn its evidence base from a number of contrasting theoretical frameworks Clinicians are now turning to neuroscience which offers a unifying knowledge base and frame of reference to understand and measure therapeutic interventions from a biomedical perspective Conversely neuroscience is becoming more enriched by learning about the neural effects of real world clinical applications in music therapy While neuroscientific imaging methods may provide biomarking evidence for the efficacy of music therapy interventions it also offers important tools to describe time

locked interactive therapy processes and feeds into the emerging field of social neuroscience Music therapy is bound to the process of creating and experiencing music together in improvisation listening and reflection Thus the situated cognition and experience of music developing over time and in differing contexts is of interest in time series data We encouraged researchers to submit papers illustrating the mutual benefits of dialogue between music therapy and other disciplines important to this field particularly neuroscience neurophysiology and neuropsychology The current eBook consists of the peer reviewed responses to our call for papers

Music Therapy and Music-Based Interventions in Neurology Kerry Devlin, Kyurim Kang, Alexander Pantelyat, 2024-02-16 This book synthesizes knowledge about the myriad ways music can support the physical and psychosocial needs of people living with neurological diagnoses It may be a useful tool for those working or training as music therapists as well as clinicians and patients interested in the use of music and rhythm to address individualized healthcare goals The editors of this book advocate for a collaborative holistic approach to the implementation of music based interventions acknowledging that different and at times conflicting approaches do exist and that different patients may require exploration of different approaches to have their needs and desires met in ways most meaningful to them The book's many contributors embody this desire to hold space for wide ranging views on clinical practice through the ways they share their own perspectives as music therapists neurologists nurses speech and language pathologists and neuroscience researchers from across the globe Each chapter is centered around clinical work in context with a specific patient community be that a diagnosis e g movement disorders shared culture e g autistic culture disease stage e g end of life or targeted clinical need e g psychosocial support and or functional performance and features a summary of available research with case examples and clinical descriptions to highlight different conceptualizations of the role of music in the care of patients with neurologic diagnoses

Arts in Health Daisy Fancourt, 2017-06-23 Over the past few decades the use of the arts in health has blossomed What for many centuries was seen as a fringe activity is now being recognised as a field that has enormous potential for impacting positively on both individuals and societies However despite this surge in interest and activity there is still limited support available for people working in the field Although the number of practical training courses for artists is growing and more universities are establishing research groups most training activity occurs in either practice or research there are relatively few opportunities to gain parallel experience in both Arts in Health Designing and Researching Interventions provides a complete overview of how to go about undertaking research and practice in the field of arts in health It starts by exploring the context for arts in health interventions including the history of the use of arts in health and

the theoretical and political developments that have laid the foundations for its flourishing It also considers what arts in health encompasses and the range of disciplines involved Part II examines how to design an arts in health intervention develop partnerships and find funding and considers the sensitivities around working in healthcare Part III considers the value of research for the field of arts in health and how to design and undertake a research project Finally part IV provides a fact file of arts in health research and practice showing how the arts can be applied and the benefits they can bring across a range of medical disciplines The book will be valuable for researchers practitioners healthcare professionals and those interested in learning more about the field

*Medical Neurohumanities: Sharing Insights from Medicine, Neuroscience and Music in Pediatric Care* Artur C. Jaschke, Efthymios Papatzikis, Friederike Barbara Haslbeck, 2025-09-08 Neurohumanities have long been debated but seldom applied in medicine with the important relationship between music sciences music therapy and pediatric care remaining underexplored As our understanding of the young brain continues to expand it is crucial to create a shared lexicon that connects music neuroscience technological innovations pediatrics and healthcare By fostering interdisciplinary collaboration we can deepen our comprehension of the working mechanisms of music therapies and medical interventions for pediatric patients Sharing insights approaches methods and interventions promotes interdisciplinary understanding enabling the development of more effective patient centered healthcare strategies that consider ethical aspects shared therapeutic goals and medical responsibilities

Sound, Music and Movement in Parkinson's Disease Marta M. N. Bieńkiewicz, Cathy Craig, 2017-01-05 Recent years have brought new insights to the understanding of Parkinson's disease impact of exercise and sound displays in rehabilitation and movement facilitation There is growing evidence that auditory signals in the environment can provide a temporal template for movement and change the mode of motor control from intrinsic to extrinsic habitual to goal directed enabling enhanced motor performance in patients In addition forced exercise rate studies show that exercising at the pace of healthy adults can have potential neuroprotective benefits for patients Many research groups have explored the use of auditory cues such as rhythmical auditory training in improving gait and upper limb movement parameters Cues are usually either intermittent metronome or continuous dynamic sound displays Similarly dance based interventions suggest that patients benefit from additional sensory information i.e. the

temporal structure embedded in music and proprioceptive information from a dancing partner that facilitates movement. On the contrary, studies dedicated to auditory perception and motor timing report an impaired ability of patients to perceive and synchronise with complex rhythmical structures, i.e. causing an inability to play musical instruments. With the growth of modern technology and the increasing portability of high specification devices such as smart phones, new research questions on the design of interventions are beginning to emerge as we strive for more efficient therapeutic approaches. In this Research Topic, we wanted to bring together top scientists from the movement disorder, motor control and sound-related studies along with therapists. That way, we can engage in cross-disciplinary and challenging scientific debate about future rehabilitation avenues and frontiers for Parkinson's disease patients.

Foundations in Music Psychology Peter Jason Rentfrow, Daniel J. Levitin, 2019-03-12. A state-of-the-art overview of the latest theory and research in music psychology written by leaders in the field. This authoritative landmark volume offers a comprehensive state-of-the-art overview of the latest theory and research in music perception and cognition. Eminent scholars from a range of disciplines employing a variety of methodologies describe important findings from core areas of the field, including music cognition, the neuroscience of music, musical performance and music therapy. The book can be used as a textbook for courses in music cognition, auditory perception, science of music, psychology of music, philosophy of music and music therapy, and as a reference for researchers, teachers and musicians. The book's sections cover music perception, music cognition, music neurobiology and evolution, musical training, ability and performance, and musical experience in everyday life. Chapters treat such topics as pitch, rhythm and timbre, musical expectancy, musicality, musical disorders and absolute pitch, brain processes involved in music perception, cross-species studies of music cognition and music across cultures, improvisation, the assessment of musical ability and singing, and music and emotions, musical preferences and music therapy. MARIA JOSÉ DA SILVA FERNANDES, VIVIANE LOURO, 2024-05-03. H quem diga que ciência e arte são opostas ou não se misturam, uma mensura, vel a outra intuitiva, uma lógica a outra abstrata. Ser mesmo? Se nosso cérebro tudo observa, interpreta, cria, sistematiza, assimila e executa, não seriam arte e ciência produtos de um mesmo radical? Os muitos cientistas não foram criados por cérebros criativos. Muitos muitos cientistas surgiram de forma intuitiva e passaram por muita improvisação antes de serem sistematicamente organizados. Operar precisamente um tumor cerebral não seria tão belo e perigoso quanto fazer uma acrobacia numa corda bamba. Ou conseguir organizar o código genético não seria tão complexo e profundo quanto
