**Handbook of Food Process Modeling and Statistical Quality Control** Mustafa Ozilgen, 2011-03-01 Presenting mathematical prerequisites in summary tables this book explains fundamental techniques of mathematical modeling processes essential to the food industry The author focuses on providing an in depth understanding of modeling techniques rather than the finer mathematical points Topics covered include modeling of transport phenomena kin **Handbook of Food Process Modeling and Statistical Quality Control** Mustafa Özilgen, 2011 Rev ed of Food process modeling and statistical quality control 1998 *Biothermodynamics* Mustafa Ozilgen, Esra Sorguven Oner, 2016-11-18 Over the past several decades there has been increasing research interest in thermodynamics as applied to biological systems This concerns topics such as muscle work and internal energy such as fat and starch Applications of the first and second laws of thermodynamics to the human body are important to dieticians and health science experts and applications of these concepts to the animal body are a major concern of animal scientists This book covers these key topics which are typically not covered in classic or traditional thermodynamics texts used in mechanical and chemical engineering Measurement, Modeling and Automation in Advanced Food Processing Bernd Hitzmann, 2017-08-11 This book review series presents current trends in modern biotechnology The aim is to cover all aspects of this interdisciplinary technology where knowledge methods and expertise are required from chemistry biochemistry microbiology genetics chemical engineering and computer science Volumes are organized topically and provide a comprehensive discussion of developments in the respective field over the past 3 5 years The series also discusses new discoveries and applications Special volumes are dedicated to selected topics which focus on new biotechnological products and new processes for their synthesis and purification In general special volumes are edited by well known guest editors The series editor and publisher will however always be pleased to receive suggestions and supplementary information Manuscripts are accepted in English *Novel and Alternative Methods in Food Processing* N. Veena, Megh R. Goyal, Ritesh B. Watharkar, 2023-08-04 This new volume explores emerging and advanced techniques in the food processing sector Novel food processing methods such as ultrasound processing microwave heating advanced drying methods and nonthermal technologies are discussed in detail The volume also covers the application of irradiation and encapsulation methods microbial valorizing and other novel food processing and preservation methods Mathematical modeling concepts and case studies are also included to illustrate applications of modeling techniques in food processing The volume promotes the understanding of the thermodynamics of food polymers structural design principles structural hierarchy and the steps involved in food structuring and structure measurement techniques Handbook of Food Engineering Practice Kenneth J. Valentas, Enrique Rotstein, R. Paul Singh, 1997-07-23 Food engineering has become increasingly important in the food industry over the years as food engineers play a key role in developing new food products and improved manufacturing processes While other textbooks have covered some aspects of this emerging field this is the

first applications oriented handbook to cover food engineering processes and manufacturing techniques A major portion of Handbook of Food Engineering Practice is devoted to defining and explaining essential food operations such as pumping systems food preservation and sterilization as well as freezing and drying Membranes and evaporator systems and packaging materials and their properties are examined as well The handbook provides information on how to design accelerated storage studies and determine the temperature tolerance of foods both of which are important in predicting shelf life The book also examines the importance of physical and rheological properties of foods with a special look at the rheology of dough and the design of processing systems for the manufacture of dough The final third of the book provides useful supporting material that applies to all of the previously discussed unit operations including cost profit analysis methods simulation procedures sanitary guidelines and process controller design The book also includes a survey of food chemistry a critical area of science for food engineers Statistics in Food and Biotechnology Gerhard Schleining, Saverio Mannino, Prisana

Suwannaporn, 2024-10-24 The proper use of statistical methods is essential in food processing and biotechnology and very few publications have focused on the practical application of these methods This book utilizes case studies to explain the corresponding basics with a focus on understanding how and when to use the appropriate statistical methods The text is structured according to practical applications starting from data collection and data treatment moving to product development process control and analytical methods Practical Examples of Using Statistics in Food and Biotechnology begins with a detailed introduction to statistics and their use in food processing The first main section focuses on statistics for data collection and treatment featuring scales of measurement sampling and summarizing and presenting data Another section looks at statistics for food product and process development examining mixture experiments for different food groups from meat and fish to vegetables juices rice and olive oils Further sections focus on statistical process control statistics for sensory science and a wide range of analytical methods including LC MS MS and other cutting edge methods In providing practical hands on information on the use of statistics in food processing this work will be of major importance for food professionals industry staff and researchers in food and biotechnology *Poultry Meat Processing* Casey M.
