Risk Analysis and Uncertainty in Flood Damage Reduction Studies National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Committee on Risk-Based Analysis for Flood Damage Reduction, 2000-11-20 Reducing flood damage is a complex task that requires multidisciplinary understanding of the earth sciences and civil engineering In addressing this task the U S Army Corps of Engineers employs its expertise in hydrology hydraulics and geotechnical and structural engineering Dams levees and other river training works must be sized to local conditions geotechnical theories and applications help ensure that structures will safely withstand potential hydraulic and seismic forces and economic considerations must be balanced to ensure that reductions in flood damages are proportionate with project costs and associated impacts on social economic and environmental values A new National Research Council report Risk Analysis and Uncertainty in Flood Damage Reduction Studies reviews the Corps of Engineers risk based techniques in its flood damage reduction studies and makes recommendations for improving these techniques Areas in which the Corps has made good progress are noted and several steps that could improve the Corps risk based techniques in engineering and economics applications for flood damage reduction are identified The report also includes recommendations for improving the federal levee certification program for broadening the scope of flood damage reduction planning and for improving communication of risk based concepts

Watershed Models Vijay P. Singh, Donald K. Frevert, 2010-09-28 Watershed modeling is at the heart of modern hydrology supplying rich information that is vital to addressing resource

planning environmental and social problems Even in light of this important role many books relegate the subject to a single chapter while books devoted to modeling focus only on a specific area of application Recognizing the **Land Use Scenarios** Alan W. Shearer, David A. Mouat, Scott D. Bassett, Michael W. Binford, Craig W. Johnson, Justin A. Saarinen, Alan W. Gertler, Julide Koracin, 2009-01-14 Any alteration of the natural processes occurring on a piece of land will have expected as well as unanticipated effects and those effects have little regard for arbitrary human boundaries Consequently it is not enough for land managers to consider only how they might maintain the parcels for which they are responsible they must also anticipate Climate and Atmospheric Dynamics and Predictability Ioannis Pytharoulis, Petros Katsafados, 2021-01-19 Earth's weather and climate are complex nonlinear systems of dynamical thermodynamical processes that are highly variable on all spatiotemporal scales The analysis and prediction of those processes and their feedbacks with the other systems of the biosphere land and ocean from the viewpoints of both atmospheric science and dynamics thermodynamics can improve our knowledge and have a great impact on society The main aim of this Special Issue was to gather observational theoretical and modeling studies on the dynamics of the atmosphere and the climate system as well as on their predictability at different spatiotemporal scales *Fresh Surface Water - Volume III* James C.I.
