Thermodynamic and Kinetic Aspects of the Vitreous State S.V. Nemilov, 2018-01-18 This is the first book to logically present the major problems of the vitreous state within the framework of irreversible thermodynamics Filled with elementary explanations for difficult problems this easily understood text reference treats in detail the criteria of glass transition the peculiarities of relaxing structural parameters and the Prigogine Defay ratio Based on the author's rigorous generalization of the Second Law for non equilibrium the book systematizes all known thermodynamic data for glasses and melts The thermodynamic essence of structural relaxation and memory effects are considered. The viscous flow theories are treated as a constituent of the kinetic description All theoretical questions are illustrated by comparison of calculations with the experiments for glasses of inorganic and organic nature with special attention to structural classification An informative review of modern structural investigations is included The bibliography follows the history of the main problems from the nineteenth century Crystalline Lasers Alexander Kaminskii, 2020-09-10 By the end of the 1970s crystalline lasers were widely used in science engineering medicine and technology. The types of lasers used have continued to grow in number to include newly discovered crystalline hosts previously known compounds generating at other spectral wavelengths and broadband tunable stimulated emission This has led to the creation of an extremely promising new generation of crystalline lasers that are both highly efficient and more reliable. The major part of this book is devoted to describing multilevel operating laser schemes for stimulated emission excitation in insulating crystals doped with lanthanide ions The first part of Crystalline Lasers deals with the history of the physics and spectroscopy of insulating laser crystals The chapters in the second part of the book present results from the study of Stark energy levels of generating ions in laser crystals and their radiative and nonradiative intermanifold transition characteristics. This section includes extensive tabular data and reference information Popular and novel operating schemes of crystalline lasers are covered in Part 3 In the chapters in the fourth part of the book the newest technologies in the physics and engineering of crystalline lasers are considered The results of investigations into laser action under selective excitations miniature crystalline lasers and the properties of nonlinear activated laser crystals are presented and analyzed Crystalline Lasers summarizes and reviews the results of many years of

research and studies of activator ions and multilevel operating laser schemes and discusses exciting prospects of using these systems to create new types of crystalline lasers This book will be of use to laser scientists and engineers physicists and chemical engineers *Handbook of Laser Technology and Applications (Three-Volume Set)* Colin Webb, Julian D.
