Geospatial Technologies and Homeland Security Daniel Sui, 2008-05-25 Homeland security and context In the Geographical Dimensions of Terrorism GDOT Cutter et al 2003 the first book after 9 11 to address homeland security and geography we developed several thematic research agendas and explored intersections between geographic research and the importance of context both geographical and political in relationship to the concepts of terrorism and security It is good to see that a great deal of new thought and research continues to flow from that initial research agenda as illustrated by many of the papers of this new book entitled Geospatial Technologies and Homeland Security Research Frontiers and Future Challenges Context is relevant not only to understanding homeland security issues broadly but also to the conduct of research on geospatial technologies It is impossible to understand the implications of a homeland security strategy let alone hope to make predictions conduct meaningful modeling and research or assess the value and dangers of geospatial technologies without consideration of overarching political social economic and geographic contexts within which these questions are posed

Brower, 2016-08-05 This book introduces the concept of hazards as part of the earth's natural systems in contrast to disasters which occur at the intersection of the built and natural environments It emphasizes choices made by society that either increase or diminish our level of vulnerability to the impacts of hazards and the role of the emergency manager in how these choices are made and acted upon The book defines key concepts including mitigation preparedness resilience vulnerability and explains the role of

the emergency manager in putting these principles into practice A Multi-Country Study of Forward-Looking Economic Losses from Floods and Tropical Cyclones Michele Fornino, Mahmut Kutlukaya, Caterina Lepore, Javier Uruñuela López, 2024-07-09 The study provides forward looking estimates for economic damages from floods and tropical cyclones TC for a wide range of countries using global datasets Damages are estimated for three Intergovernmental Panel on Climate Change IPCC scenarios and aggregated at the country level building them from geographically disaggregated estimates of hazard severity and economic exposures across 183 countries The results show that for most countries floods and TC s damage rates increase i during the estimation span of 2020 to 2100 and ii with more severe global warming scenarios In line with other global studies expected floods and TCs damages are unevenly distributed across the world The estimates can be used for a wide range of applications as damage rates represent the key variable connecting climate scenarios to economics and financial sector risk analysis Encyclopedia of Disaster Relief K.
