Marine Biotechnology Enabling Solutions For Ocean Productivity And Sustainability:

Marine Biotechnology Enabling Solutions for Ocean Productivity and Sustainability OECD,2013-09-02 This report considers the potential of marine biotechnology to contribute to economic and social prosperity by making use of recent advances in science and technology

Building Industries at Sea - 'Blue Growth' and the New Maritime Economy Kate Johnson,Ian Masters,Gordon Dalton,2022-09-01 Throughout the world there is evidence of mounting interest in marine resources and new maritime industries to create jobs economic growth and to help in the provision of energy and food security Expanding populations insecurity of traditional sources of supply and the effects of climate change add urgency to a perceived need to address and overcome the serious challenges of working in the maritime environment Four promising areas of activity for Blue Growth have been identified at European Union policy level including Aquaculture Renewable Energy offshore wind wave and tide Seabed Mining and Blue Biotechnology Work has started to raise the technological and investment readiness levels TRLs and IRLs of these prospective industries drawing on the experience of established maritime industries such as Offshore Oil and Gas Shipping Fisheries and Tourism An accord has to be struck between policy makers and regulators on the one hand anxious to direct research and business incentives in effective and efficient directions and developers investors and businesses on the other anxious to reduce the risks of such potentially profitable but innovative investments The EU H2020 MARIBE Marine Investment for the Blue Economy funded project was designed to identify the key technical and non technical challenges facing maritime industries and to place them into the social and economic context of the coastal and ocean economy MARIBE went on to examine with companies real projects for the combination of marine industry sectors into multi use platforms MUPs The purpose of this book is to publish the detailed analysis of each prospective and established maritime business sector Sector experts working to a common template explain what these industries are how they work their prospects to create wealth and employment and where they currently stand in terms of innovation trends and their lifecycle The book goes on to describe progress with the changing regulatory and planning regimes in the European Sea Basins including the Caribbean where there are significant European interests The book includes Experienced chapter authors from a truly multidisciplinary team of sector specialisms First extensive study to compare and contrast traditional Blue Economy with Blue Growth Complementary to EU and National policies for multi use of maritime space

Grand Challenges in Marine Biotechnology Pabulo H. Rampelotto,Antonio Trincone,2018-05-15 This book serves as essential reading for research scientists and biotechnologists from both academia and industry working in marine biotechnology and related disciplines The book discusses recent advances and challenges in terms of science technology innovation and policy for the development of the field and how marine biotechnology may provide new solutions to some of the grand challenges faced by our society Written in an accessible language the book is also recommended as a reference text for decision makers in government and non governmental organizations in their efforts to foster the

development of a global blue economy With less than 5 % of the vast and rich marine environment explored our seas and oceans represent a virtually unexplored resource for the discovery of novel product processes and development of bio inspired synthetic drugs with biotechnological potential As such the marine environment has been considered Earth s last frontier of exploration Recent advances in molecular techniques are providing the necessary tools to access on a larger scale the still untapped ocean resources and consequently unveil the promise of the blue biotechnology Governments are recognizing the potential of marine biotechnology to provide solutions to some of the Grand Challenges of the 21st Century such as sustainable energy and food sources identification of novel drugs for improved health treatments and providing new industrial materials and processes For this reason advances in marine biotechnology may foster the much needed source of innovation and economic growth in many countries and pave the way towards the development of a global blue economy i e a new economic model based on the sustainable exploration of our ocean ecosystems **The Blue Economy** Somnath

Hazra, Anindya Bhukta, 2022-10-13 This volume defines and analyzes the Blue Economy a system that encompasses all the economic activities which are happening in and around the ocean within a sustainable development framework with focus on countries in Asia This work is timely as Blue Economy activities account for a significant share of GDPs in the island and coastal economies in the Asia region sustaining the livelihoods of one of the largest sections of the world s population This book therefore assesses how the Blue Economy contributes to these livelihoods from economic and ecological perspectives and analyzes the various types of ecosystem services provided and how these services are regulated and maintained While most studies of the Blue Economy focus only on the economic aspects this book provides ample statistical data to demonstrate why ecosystem services should additionally be considered for the estimation and valuation of the Blue economy The book is primarily meant for researchers students and teachers in the fields of environmental and ocean economics sustainable development and ecosystem services and will be of further interest to policymakers and government officials working in matters related to the Blue Economy and sustainability policy *Economic value of ecosystem services from the deep seas and the areas beyond national jurisdiction* Food and Agriculture Organization of the United Nations, Ottaviani, D., 2020-05-01 This circular stems from a study carried out for FAO projects Sustainable Fisheries Management and Biodiversity Conservation of Deep Sea Living Marine Resources and Ecosystems in the Areas Beyond National Jurisdiction GCP GLO 366 GFF and Deep Sea Sponge Grounds Ecosystems of the North Atlantic An Integrated Approach Towards their Preservation and Sustainable Exploitation GCP GLO 679 EC These projects included outputs related to the economic valuation of goods and services provided by the deep seas in areas beyond national jurisdiction This study compiled an estimate of the total economic value TEV of the deep seas which considered the provision of deep water fish the harvest of precious corals the use of substances of marine origin as pharmaceuticals the extraction of deep and ultra deep oil and the potential mining of mineral resources from the seafloor carbon sequestration carried out by the deep seas the importance of

scientific research in the deep seas and touristic activities with submersibles to visit sites such as the Titanic shipwreck. Comprehensively the TEV assessed for the deep sea ecosystem as a whole is estimated at USD 267 billion per year. Ninety two percent of the economic value originates from abiotic resources (oil and minerals) 5 percent from biotic resources (fish, corals and pharmaceuticals) of marine origin 2 percent from cultural services (scientific research and tourism recreation) and 1 percent from carbon sequestration.

Developing the Blue Economy Robert C. Brears, 2021-10-20. Traditionally the ocean economy is viewed solely as a mechanism for economic growth. In this business as usual approach large scale industrial economies have developed the ocean economy through the exploitation of maritime and marine resources often without consideration of how those activities impact the future health or productivity of those same resources. This has led to aquatic ecosystems being viewed and treated as limitless resources, the marine environment becoming a dumping ground for waste, overfishing, diminishing fishing stocks, ocean habitats being degraded from coastal developments, sea level rise impacting coastal communities and infrastructure, increasing ocean acidification and the marginalisation of poor coastal communities. Recognising the failings of the traditional ocean economy, there is a transition underway around the world towards the Blue Economy. This concept moves beyond the business as usual approach with economic development and ocean health complementary to one another. In the Blue Economy the environmental risks of and ecological degradation from economic activity are mitigated or significantly reduced. Therefore economic activity is in balance with the long term capacity of the ocean ecosystems to support this activity and remain healthy and resilient. This book will provide an overview of the various technologies used to promote cross sectoral and multi scalar collaboration, facilitate the integrated management of sectors and resources, foster partnerships between governments and industry, encourage R D in new technologies in resource use and management and scale up innovative financing mechanisms in the development of a Blue Economy. Also the book will contain in depth case studies that illustrate how locations of differing climates, lifestyles and income levels have implemented technologies to facilitate the development of the Blue Economy. *Developing the Blue Economy* will provide an accessible resource for practitioners and researchers working in the field on the various innovative technologies being implemented around the world to create a Blue Economy.

The Ocean Economy in 2030 OECD, 2016-04-27. This report explores the growth prospects for the ocean economy, its capacity for future employment creation and innovation and its role in addressing global challenges. Special attention is devoted to the emerging ocean based industries.

Research Handbook on International Law and Natural Resources Elisa Morgera, Kati Kulovesi, 2016-11-25. *Research Handbook on International Law and Natural Resources* provides a systematic and comprehensive analysis of the role of international law in regulating the exploration and exploitation of natural resources. It illuminates interactions and tensions between international environmental law, human rights law and international economic law. It also discusses the relevance of soft law, international dispute settlement as well as of various unilateral, bilateral, regional and transnational initiatives in the governance of natural

resources While the Handbook is accessible to those approaching the subject for the first time it identifies pressing areas for further investigation that will be of interest to advanced researchers *Policy Coherence for Sustainable Development 2017 Eradicating Poverty and Promoting Prosperity* OECD,2017-05-29 With the adoption of the 2030 Agenda for Sustainable Development all nations committed to a set of universal integrated and transformational goals and targets the Sustainable Development Goals SDGs Translating the new vision of the SDGs into action is a major challenge **Marine Genetic Resources, R&D and the Law 1** Bleuenn Guilloux,2018-06-21 Advances in research and development reveal the immense diversity and potential of marine genetic resources Under international law no specific regime applies to these complex and paradoxical objects of use The Law of the Sea Convention sets a framework that is partly inadequate for this new category of resources The Biodiversity Convention and the Nagoya Protocol only address the genetic resources of national areas Patents allow their holder to exercise a monopoly on exploiting biotechnological creations to extensive claims questioning the common nature of biodiversity and related knowledge They hinder research and the objectives of biodiversity law The legal and practical rules of physical and functional access vary in geometry They focus on the valorization of research results crystallizing conflicts of interest between suppliers and users Sustainable research and development is essential to the knowledge and protection of marine biodiversity The qualification of marine genetic resources in common standard contractual tools distributed research and development infrastructures negotiation of an agreement on sustainable use and conservation of biodiversity beyond the limits of national jurisdiction would To remove these inconsistencies **The Routledge Handbook of Sustainable Food and Gastronomy** Philip Sloan,Willy Legrand,Clare Hindley,2015-06-12 The issues surrounding the provision preparation and development of food products is fundamental to every human being on the planet Given the scarcity of agricultural land environmental pollution climate change and the exponential growth of the world's population where starvation and obesity are both widespread it is little wonder that exploring the frontiers of food is now a major focus for researchers and practitioners This timely Handbook provides a systematic guide to the current state of knowledge on sustainable food It begins by analyzing the historical development surrounding food production and consumption then moves on to discuss the current food crisis and challenges as well as the impacts linked to modern agriculture and food security Finally it concludes with a section that examines emerging sustainable food trends and movements in addition to an analysis of current food science innovations Developed from specifically commissioned original contributions the Handbook's inherent multidisciplinary approach paves the way for deeper understanding of all aspects linked to the evolution of food in society including insights into local food food and tourism organic food indigenous and traditional food sustainable restaurant practices consumption patterns and sourcing This book is essential reading for students researches and academics interested in the possibilities of sustainable forms of gastronomy and gastronomy's contribution to sustainable development The title includes a foreword written by Roberto Flore Head Chef at the Nordic Food

Lab Copenhagen Denmark *The Marine Microbiome* Lucas J. Stal, Mariana Silvia Cretoiu, 2016-06-03 This book describes the state of the art concerning the marine microbiome and its uses in biotechnology The first part discusses the diversity and ecology of marine microorganisms and viruses including all three domains of life Bacteria Archaea and Eukarya It discusses whether marine microorganisms exist and if so why they might be unique The second part presents selected marine habitats their inhabitants and how they influence biogeochemical cycles while the third discusses the utilization of marine microbial resources including legal aspects dissemination and public awareness The marine microbiome is the total of microorganisms and viruses in the ocean and seas and in any connected environment including the seafloor and marine animals and plants The diversity of microbial life remains unquantified and largely unknown and could represent a hidden treasure for human society Accordingly this book is also intended to connect academics and industry providing essential information for microbiologists from both fields **Advances in Waste-to-Energy Technologies** Rajeev Singh, Vishal Prasad, Barkha Vaish, 2019-11-14 As global populations continue to increase the application of biotechnological processes for disposal and control of waste has gained importance in recent years Advances in Waste to Energy Technologies presents the latest developments in the areas of solid waste management Waste to Energy WTE technologies biotechnological approaches and their global challenges It combines biotechnological procedures sophisticated modeling and techno economic analysis of waste and examines the current need for the maximum recovery of energy from wastes as well as the associated biotechnological and environmental impacts Features Presents numerous waste management practices and methods to recover resources from waste using the best biotechnological approaches available Addresses the challenges management and policy issues of waste management and WTE initiatives Includes practical case studies from around the world Serves as a useful resource for professionals and students involved in cross disciplinary and trans disciplinary research programs and related courses Discusses the economic and regulatory contexts for managing waste This book will serve as a valuable reference for researchers academicians municipal authorities government bodies waste managers building engineers and environmental consultants requiring an understanding of waste management and the latest WTE technologies The Global Governance of Genetic Resources Florian Rabitz, 2017-04-28 How is access to genetic resources and the equitable sharing of the benefits arising out of their use to be guaranteed Exploring the subject comparatively with regard to intellectual property rights food and agriculture health and access to oceans this book creates a new theory of change in multilevel global governance **OECD Green Growth Studies Greening the Blue Economy in Pomorskie, Poland** OECD, 2017-11-21 As coastal area on the Baltic Sea in north central Poland Pomorskie faces unique challenges and opportunities associated with the transition to a green economy a diversified economy growing population and significant natural resources This report focuses on the sustainable development of the City Policies and the European Urban Agenda Martín Fernández-Prado, Luis Domínguez Castro, 2019-05-06 During the next few years most European and World cities will be

developing urban agendas Materials published on the subject have been relatively scarce until now This edited volume introduces a case study implementation of the European Urban Agenda EUA in a cross border region in the Iberian Peninsula between Spain Galicia and Portugal It explores the implementation of a number of urban core principles in two distinctive regions serving as the basis for a comparative analysis on how such galvanizing principles work contained in the EUA The case presented in this edited volume is the first cross border urban agenda to be drafted It is a unique piece that contributes to our understanding of the complexities of implementing and translating a common set of urban European principles to variety of different local milieus The chapters of the book closely examine the various strands of the implementation of urban policies through the lenses of land use economic competition innovation culture and creative industries energy ecology demographic challenges housing social inclusion and democratic governance These chapters are written by international renowned scholars who were involved in the drawing up of the urban agenda for this territory The ideas principles and concepts that they impart can be extrapolated to most cities OECD Green Growth Studies Green Growth in Fisheries and Aquaculture OECD,2015-04-21 This report summarises the current situation regarding green growth in fisheries and aquaculture observing that in many parts of the world these sectors are at risk and do not reach their full potential

Secretary-General's Report to Ministers 2012 OECD,2012-11-19 In this report released in May at the annual meeting of the OECD Council at ministerial level the Secretary General summarises the activities of the OECD during the previous year *Natural Capital and Exploitation of the Deep Ocean* Maria Baker,Eva Ramirez-Llodra,Paul Tyler,2020-08-28 The deep ocean is by far the planet s largest biome and holds a wealth of potential natural assets Human exploitation of the deep ocean is rapidly increasing whilst becoming more visible to many through the popular media particularly film and television The scientific literature of deep sea exploitation and its effects has also rapidly expanded as a direct function of this increased national and global interest in exploitation of deep sea resources both biological e g fisheries genetic resources and non biological e g minerals oil gas methane hydrate At the same time there is a growing interest in deep sea contamination including plastics with many such studies featured in high profile scientific journals and covered by global media outlets However there is currently no comprehensive integration of this information in any form and these topics are only superficially covered in classic textbooks on deep sea biology This concise and accessible work provides an understanding of the relationships between biodiversity and ecosystem functioning both at the seafloor and in the water column and how these might be affected as a result of human interaction exploitation and ultimately environmental change It follows a logical progression from geological and physical processes ecology biology and biogeography to exploitation management and conservation *Natural Capital and Exploitation of the Deep Ocean* is aimed at marine biologists and ecologists oceanographers fisheries scientists and managers fish biologists environmental scientists and conservation biologists It will also be of relevance and use to a multi disciplinary audience of fish and wildlife agencies NGOs and

government departments involved in deep sea conservation and management
