the classic paradigm has been from the recognition of static objects in the scene to motion based recognition of actions and events Video understanding has overlapping research problems with other fields therefore blurring the fixed boundaries Computer graphics image processing and video databases have obvious overlap with computer vision The main goal of computer graphics is to generate and animate realistic looking images and videos Researchers in computer graphics are increasingly employing techniques from computer vision to generate the synthetic imagery A good example of this is image based rendering and modeling techniques in which geometry appearance and lighting is derived from real images using computer vision techniques Here the shift is from synthesis to analysis followed by synthesis Image processing has always overlapped with computer vision because they both inherently work directly with images

Revisiting the Toolbox of Discourse Studies Markus Rheindorf, 2019-06-07 This book revisits discourse analytic practice analyzing the idea that the field has access to provides or even constitutes a toolbox of methods The precise characteristics of this toolbox have remained largely untheorized and the author discusses the different sets of tools and their combinations particularly those that cut across traditional divides such as those between disciplines or between quantitative and qualitative methods The author emphasizes the potential value of integrating methods in terms of triangulation and its specific benefits arguing that current trends in Open Science require Discourse Studies to reexamine its methodological scope and choices and move beyond token acknowledgements of eclecticism In depth case studies supplement the methodological discussion and demonstrate the challenges and benefits of triangulation This book will be a valuable resource for students and scholars in Discourse Studies particularly those with an interest in combining methods and working across disciplines
