## CONSTRUCTING BASIC

The first step in constructing a basic is to determine the shape and size of the basic. The shape is determined by the number of sides and the size is determined by the length of the sides. The basic is then constructed by drawing the sides and connecting the vertices.

The second step is to determine the position of the basic. This is done by drawing a line from the center of the basic to the center of the figure. The basic is then placed on the figure so that the line passes through the center of the basic.
